

# Dual and Quad Rail-to-Rail Output, Picoamp Input Precision Op Amps

## FEATURES

- **Offset Voltage: 50 $\mu$ V Maximum (LT1881A)**
- **Input Bias Current: 200pA Maximum (LT1881A)**
- **Offset Voltage Drift: 0.8 $\mu$ V/ $^{\circ}$ C Maximum**
- **Rail-to-Rail Output Swing**
- **Supply Range: 2.7V to 36V**
- Operates with Single or Split Supplies
- Open-Loop Voltage Gain: 1 Million Minimum
- 1mA Maximum Supply Current Per Amplifier
- Stable at  $A_V = 1$ ,  $C_L = 1000$ pF
- Standard Pinouts

## APPLICATIONS

- Thermocouple Amplifiers
- Bridge Transducer Conditioners
- Instrumentation Amplifiers
- Battery-Powered Systems
- Photo Current Amplifiers

## DESCRIPTION

The LT<sup>®</sup>1881 and LT1882 op amps bring high accuracy input performance to amplifiers with rail-to-rail output swing. Input bias currents and capacitive load driving capabilities are superior to the similar LT1884 and LT1885 amplifiers, at the cost of a slight loss in speed. Input offset voltage is trimmed to less than 50 $\mu$ V and the low drift maintains this accuracy over the operating temperature range. Input bias currents are an ultralow 200pA maximum.

The amplifiers work on any total power supply voltage between 2.7V and 36V (fully specified from 5V to  $\pm 15$ V). Output voltage swings to within 40mV of the negative supply and 220mV of the positive supply make these amplifiers good choices for low voltage single supply operation.

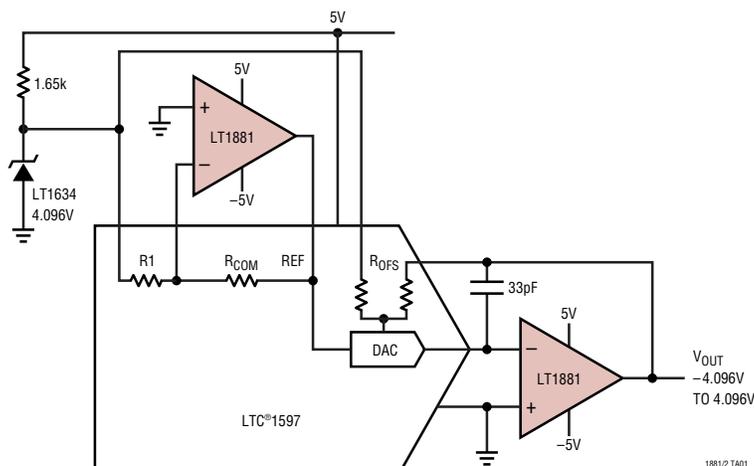

Capacitive loads up to 1000pF can be driven directly in unity-gain follower applications.

The dual LT1881 and LT1881A are available with standard pinouts in S8 and PDIP packages. The quad LT1882 is in a 14-pin SO package. For a higher speed device with similar DC specifications, see the LT1884/LT1885.

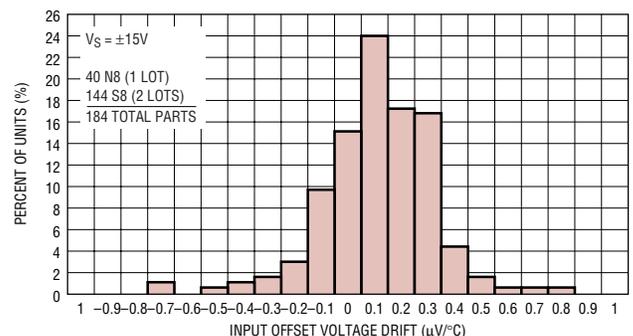

LT, LT, LTC and LTM are registered trademarks of Linear Technology Corporation.

## TYPICAL APPLICATION

16-Bit Voltage Output DAC on  $\pm 5$ V Supply

TC  $V_{OS}$  Distribution, Industrial Grade

# LT1881/LT1882

## ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply Voltage ( $V^+$ to $V^-$ ) .....	40V	Operating Temperature Range (Note 4) ..	$-40^{\circ}\text{C}$ to $85^{\circ}\text{C}$
Differential Input Voltage (Note 2) .....	$\pm 10\text{V}$	Specified Temperature Range (Note 5) ...	$-40^{\circ}\text{C}$ to $85^{\circ}\text{C}$
Input Voltage .....	$V^+$ to $V^-$	Maximum Junction Temperature .....	$150^{\circ}\text{C}$
Input Current (Note 2) .....	$\pm 10\text{mA}$	Storage Temperature Range .....	$-65^{\circ}\text{C}$ to $150^{\circ}\text{C}$
Output Short-Circuit Duration (Note 3) .....	Indefinite	Lead Temperature (Soldering, 10 sec) .....	$300^{\circ}\text{C}$

## ELECTRICAL CHARACTERISTICS

The ● denotes the specifications which apply over the full operating temperature range, otherwise specifications are at  $T_A = 25^\circ\text{C}$ . Split supply operation  $V_S = \pm 15\text{V}$ ,  $V_{CM} = 0\text{V}$  unless otherwise noted. (Note 5)

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
$SR^-$	Slew Rate Negative	$A_V = -1$	0.13 0.1	0.20		$\text{V}/\mu\text{s}$ $\text{V}/\mu\text{s}$
FPBW	Full-Power Bandwidth	$V_{OUT} = 28\text{V}_{P-P}$ (Note 10)	1.47 1.13	2.25		$\text{kHz}$ $\text{kHz}$
$\Delta V_{OS}$	Offset Voltage Match (LT1881/LT1882)	(Note 5) $0^\circ\text{C} < T_A < 70^\circ\text{C}$ $-40^\circ\text{C} < T_A < 85^\circ\text{C}$		42	125	$\mu\text{V}$ $\mu\text{V}$ $\mu\text{V}$
	Offset Voltage Match (LT1881A)	$0^\circ\text{C} < T_A < 70^\circ\text{C}$ $-40^\circ\text{C} < T_A < 85^\circ\text{C}$		35	70	$\mu\text{V}$ $\mu\text{V}$ $\mu\text{V}$
	Offset Voltage Match Drift	(Notes 6, 7)		0.4	1.1	$\mu\text{V}/^\circ\text{C}$
$\Delta I_{B+}$	Noninverting Bias Current Match (LT1881/LT1882)	(Notes 7, 8) $0^\circ\text{C} < T_A < 70^\circ\text{C}$ $-40^\circ\text{C} < T_A < 85^\circ\text{C}$		240	700	$\text{pA}$ $\text{pA}$ $\text{pA}$
	Noninverting Bias Current Match (LT1881A)	$0^\circ\text{C} < T_A < 70^\circ\text{C}$ $-40^\circ\text{C} < T_A < 85^\circ\text{C}$		200	300	$\text{pA}$ $\text{pA}$ $\text{pA}$
$\Delta\text{CMRR}$	Common Mode Rejection Match	(Notes 7, 9)	110	125		$\text{dB}$
$\Delta+\text{PSRR}$	Positive Power Supply Rejection Match	$V^- = -15\text{V}$ , $V_{CM} = 0\text{V}$ , $1.5\text{V} < V^+ < 18\text{V}$ , (Notes 7, 9)	108	130		$\text{dB}$
$\Delta-\text{PSRR}$	Negative Power Supply Rejection Match	$V^+ = 15\text{V}$ , $V_{CM} = 0\text{V}$ , $-1.5\text{V} < V^- < -18\text{V}$ , (Notes 7, 9)	104	130		$\text{dB}$

**Note 1:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

**Note 2:** The inputs are protected by internal resistors and back-to-back diodes. If the differential input voltage exceeds  $\pm 0.7\text{V}$ , the input current should be limited externally to less than  $10\text{mA}$ .

**Note 3:** A heat sink may be required to keep the junction temperature below absolute maximum.

**Note 4:** The LT1881C, LT1882C, LT1881I and LT1882I are guaranteed functional over the operating temperature range of  $-40^\circ\text{C}$  to  $85^\circ\text{C}$ .

**Note 5:** The LT1881C and LT1882C are designed, characterized and expected to meet specified performance from  $-40^\circ\text{C}$  to  $85^\circ\text{C}$  but are not

tested or QA sampled at these temperatures. The LT1881I and LT1882I are guaranteed to meet specified performance from  $-40^\circ\text{C}$  to  $85^\circ\text{C}$ .

**Note 6:** This parameter is not 100% tested.

**Note 7:** Matching parameters are the difference between amplifiers A and B in the LT1881; and between amplifiers A and D and B and C in the LT1882.

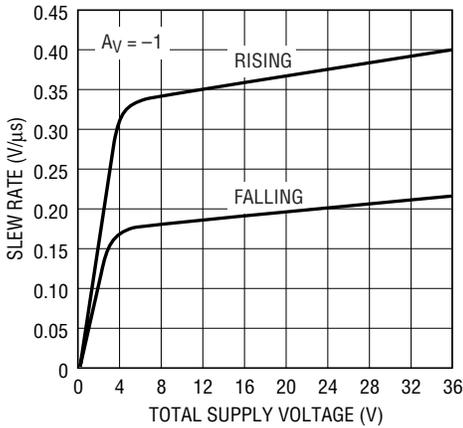

**Note 8:** This parameter is the difference between the two noninverting input bias currents.

**Note 9:**  $\Delta\text{CMRR}$  and  $\Delta\text{PSRR}$  are defined as follows: CMRR and PSRR are measured in  $\mu\text{V}/\text{V}$  on each amplifier. The difference is calculated in  $\mu\text{V}/\text{V}$  and then converted to  $\text{dB}$ .

**Note 10:** Full power bandwidth is calculated from the slew rate:  $\text{FPBW} = \text{SR}/2\pi V_P$ .

## APPLICATIONS INFORMATION

The LT1881 dual and LT1882 quad op amps feature exceptional input precision with rail-to-rail output swing. The amplifiers are similar to the LT1884 and LT1885 devices. The LT1881 and LT1882 offer superior capacitive load driving capabilities over the LT1884 and LT1885 in low voltage gain configurations. Offset voltages are trimmed to less than  $50\mu\text{V}$  and input bias currents are less than  $200\text{pA}$  on the “A” grade devices. Obtaining beneficial advantage of these precision input characteristics depends upon proper applications circuit design and board layout.

### Preserving Input Precision

Preserving the input voltage accuracy of the LT1881/LT1882 requires that the applications circuit and PC board layout do not introduce errors comparable to or greater than the  $30\mu\text{V}$  offset. Temperature differentials across the input connections can generate thermocouple voltages of 10’s of microvolts. PC board layouts should keep connections to the amplifier’s input pins close together and away from heat dissipating components. Air currents across the board can also generate temperature differentials.

The extremely low input bias currents,  $150\text{pA}$ , allow high accuracy to be maintained with high impedance sources and feedback networks. The LT1881/LT1882’s low input bias currents are obtained by using a cancellation circuit on-chip. This causes the resulting  $I_{\text{BIAS}+}$  and  $I_{\text{BIAS}-}$  to be uncorrelated, as implied by the  $I_{\text{OS}}$  specification being greater than the  $I_{\text{BIAS}}$ . The user should not try to balance the input resistances in each input lead, as is commonly recommended with most amplifiers. The impedance at either input should be kept as small as possible to minimize total circuit error.

PC board layout is important to insure that leakage currents do not corrupt the low  $I_{\text{BIAS}}$  of the amplifier. In high precision, high impedance circuits, the input pins should be surrounded by a guard ring of PC board interconnect, with the guard driven to the same common mode voltage as the amplifier inputs.

### Input Common Mode Range

The LT1881 and LT1882 outputs are able to swing nearly to each power supply rail, but the input stage is limited to operating between  $V^- +1\text{V}$  and  $V^+ -1\text{V}$ . Exceeding this common mode range will cause the gain to drop to zero; however, no phase reversal will occur.

### Input Protection

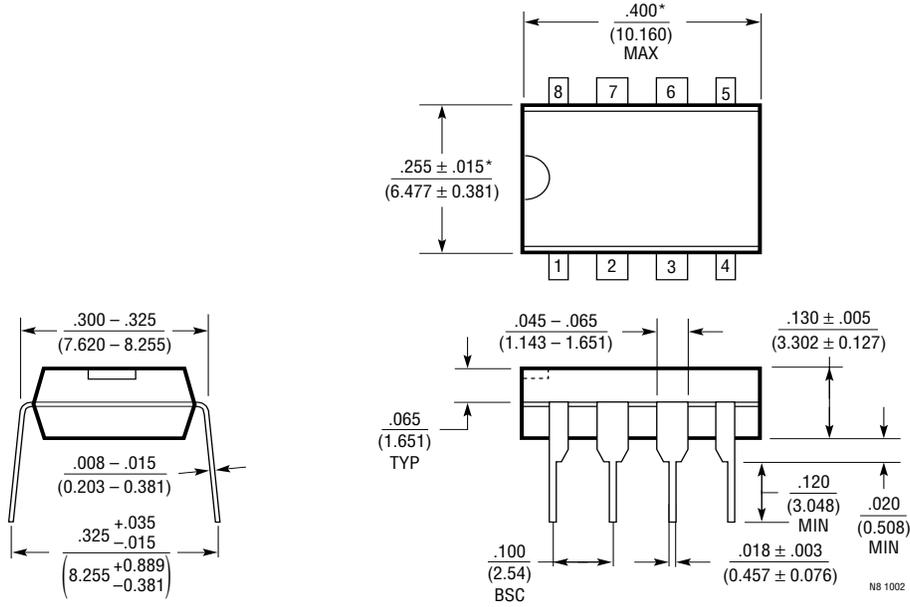

The inverting and noninverting input pins of the LT1881 and LT1882 have limited on-chip protection. ESD protection is provided to prevent damage during handling. The input transistors have voltage clamping and limiting resistors to protect against input differentials up to  $10\text{V}$ . Short transients above this level will also be tolerated. If the input pins can see a sustained differential voltage above  $10\text{V}$ , external limiting resistors should be used to prevent damage to the amplifier. A  $1\text{k}$  resistor in each input lead will provide protection against a  $30\text{V}$  differential voltage.

### Capacitive Loads

The LT1881 and LT1882 can drive capacitive loads up to  $1000\text{pF}$  in unity-gain. The capacitive load driving increases as the amplifier is used in higher gain configurations. Capacitive load driving may be increased by decoupling the capacitance from the output with a small resistance.

**PACKAGE DESCRIPTION**

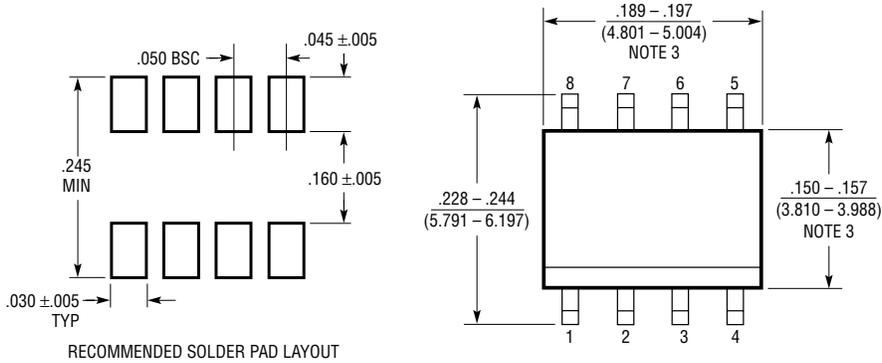

**N8 Package**  
**8-Lead PDIP (Narrow 0.300)**  
 (LTC DWG # 05-08-1510)

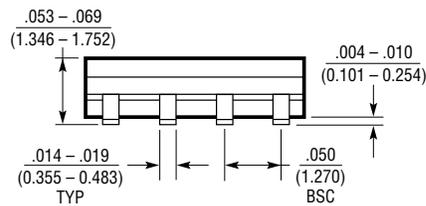

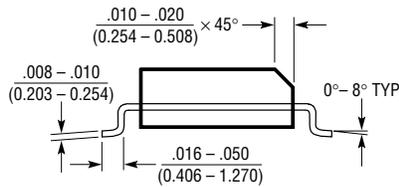

NOTE:  
 1. DIMENSIONS ARE  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$   
 \*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
 MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .010 INCH (0.254mm)

# PACKAGE DESCRIPTION

## S8 Package 8-Lead Plastic Small Outline (Narrow 0.150) (LTC DWG # 05-08-1610)

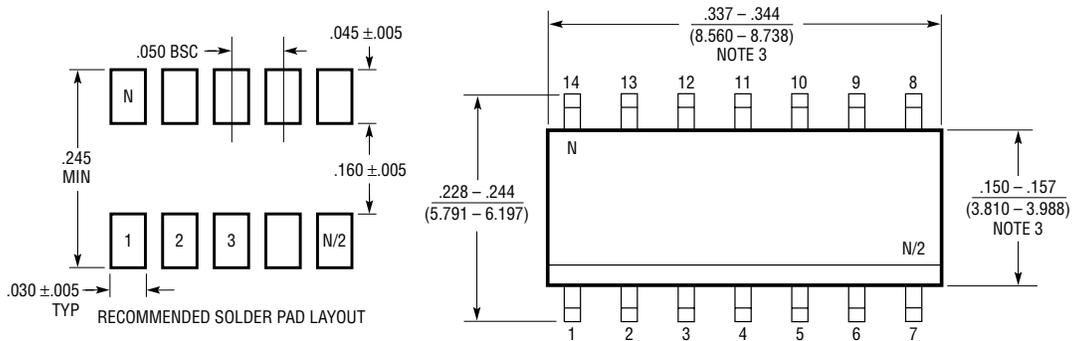

RECOMMENDED SOLDER PAD LAYOUT

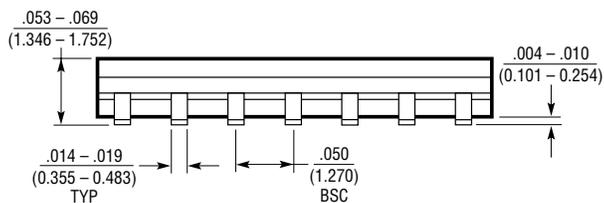

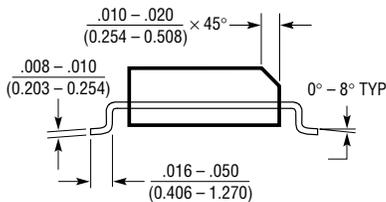

- NOTE:  
1. DIMENSIONS IN  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$   
2. DRAWING NOT TO SCALE  
3. THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .006" (0.15mm)

S08 0303

## S Package 14-Lead Plastic Small Outline (Narrow 0.150) (LTC DWG # 05-08-1610)

RECOMMENDED SOLDER PAD LAYOUT

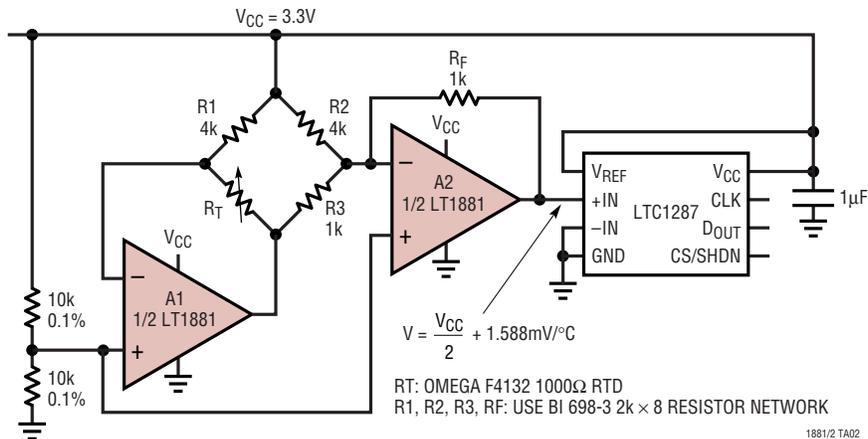

- NOTE:  
1. DIMENSIONS IN  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$   
2. DRAWING NOT TO SCALE  
3. THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .006" (0.15mm)

S14 0502

## TYPICAL APPLICATION

-50°C to 600°C Digital Thermometer Operates on 3.3V
