MAXIM

3.5Ω, Single 8:1 and Dual 4:1, Low-Voltage Analog Multiplexers

MAX4638/MAX4639

General Description

The MAX4638/MAX4639 are single 8:1 and dual 4:1 CMOS analog multiplexers/demultiplexers (muxes/demuxes). Each mux operates from a single +1.8V to +5V supply or dual ±2.5V supplies. These devices feature 3.5Ω on-resistance (R_{ON}) when powered with a single +5V supply and have -75dB of off-isolation and -85dB crosstalk from the output to each off channel. The switching times are 18ns t_{ON} and 7ns t_{OFF}. They feature a -3dB 85MHz bandwidth and a guaranteed 0.25nA leakage current at +25°C.

A +1.8V to +5.5V operating range makes the MAX4638/MAX4639 ideal for battery-powered, portable instruments. All channels guarantee break-before-make switching. These parts feature bidirectional operation and can handle Rail-to-Rail® analog signals. All control inputs are TTL/CMOS-logic compatible. Decoding is in standard BCD format, and an enable input is provided to simplify cascading of devices. These devices are available in small 16-pin QFN, TSSOP and SOIC packages, as well as a 20-pin QFN package.

Applications

Automatic Test Equipment

Low-Voltage Data-Acquisition Systems

Audio and Video Signal Routing

Medical Equipment

Battery-Powered Equipment

Relay Replacement

Features

♦ **Guaranteed R_{ON}**
3.5Ω (+5V or ±2.5V Supplies)
6Ω (+3V Supply)

♦ **Guaranteed 0.4Ω R_{ON} Match Between Channels**

♦ **Guaranteed 1Ω R_{ON} Flatness Over Signal Range**

♦ **Guaranteed Low Leakage Currents**
0.25nA at +25°C

♦ **Switching Times: t_{ON} = 18ns, t_{OFF} = 7ns**

♦ **+1.8V to +5.5V Single-Supply Operation**
±2.5V Dual-Supply Operation

♦ **Rail-to-Rail Signal Handling**

♦ **TTL/CMOS-Logic Compatible**

♦ **Crosstalk: -80dB (1MHz)**

♦ **Off-Isolation: -60dB (10MHz)**

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX4638EGE	-40°C to +85°C	16 QFN (4 × 4)
MAX4638EUE	-40°C to +85°C	16 TSSOP
MAX4638ESE	-40°C to +85°C	16 SO
MAX4638EGP	-40°C to +85°C	20 QFN (4 × 4)

  16-Pin SO (derate 8.70mW/°C above +70°C) 696mW
  20-Pin QFN (derate 20mW/°C above +70°C) 1600mW
Operating Temperature Range
  MAX463_E_ E .... -40°C to +85°C
Junction Temperature...+150°C
Storage Temperature Range .... -65°C to +150°C
Lead Temperature (soldering, 10s) .... +300°C

Note 1: Signals on COM_, NO_ exceeding V+ or V- are clamped by internal diodes. A_ and EN are clamped only to V- and can exceed V+ up to their maximum ratings. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

			T_A = T_{MIN} to T_{MAX}	1			

Note 2: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.
Note 3: ΔR_{ON} = $R_{ON(MAX)}$ - $R_{ON(MIN)}$.
Note 4: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.
Note 5: Guaranteed by design.
Note 6: Off-Isolation = $20\log_{10}$ ($V_{COM\_}$ / $V_{NO\_}$), $V_{COM\_}$ = output, $V_{NO\_}$ = input to off switch.
**Note 7:** Between any two switches.
Note 8: ΔR_{ON} matching specifications for QFN packaged parts are guaranteed by design.

MAXIM

3.5Ω, Single 8:1 and Dual 4:1, Low-Voltage Analog Multiplexers

Detailed Description

The MAX4638/MAX4639 are low-voltage, CMOS analog muxes. The MAX4638 is an 8:1 mux that switches one of eight inputs (NO1–NO8) to a common output (COM) as determined by the 3-bit binary inputs A0, A1, and A2. The MAX4639 is a 4:1 dual mux that switches one of four differential inputs to a common differential output as determined by the 2-bit binary inputs A0 and A1. Both the MAX4638/MAX4639 have an EN input that can be used to enable or disable the device. When disabled, all channels are switched off. See Truth Tables.

Applications Information

Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence V+ on first, then V-, followed by the logic inputs. If power-supply sequencing is not possible, add two small-signal diodes (D1, D2) in series with the supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to one diode drop below V+ and one diode drop above V-, but does not affect the devices' low switch resistance. Device operation is unchanged, and the difference between V+ and V- should not exceed 6V. These protection diodes are not recommended when using a single supply. For single-supply operation, V- should be connected to GND as close to the device as possible.

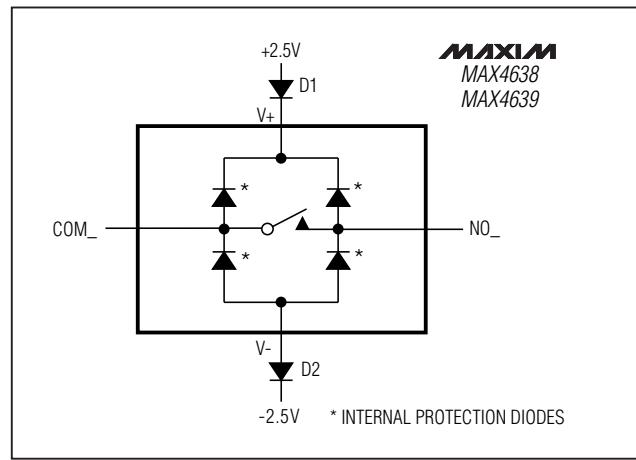

Figure 1. Overvoltage Protection Using External Blocking Diodes
