## Low Noise, High Linearity, Active Bias Low Noise Amplifier

**AVAGO**  
TECHNOLOGIES

## Data Sheet

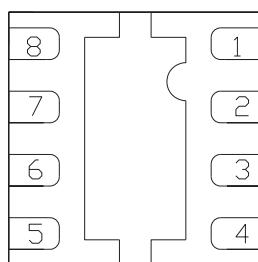

### Description

Avago Technologies' MGA-631P8 is an economical, easy-to-use GaAs MMIC Low Noise Amplifier (LNA) with active bias. The LNA has low noise with excellent input return loss and high linearity achieved through the use of Avago Technologies' proprietary 0.5um GaAs Enhancement-mode pHEMT process. The LNA has an extra feature that allows a designer to adjust supply current and gain externally. Due to the high isolation between the input and output, gain can be adjusted independently through a resistor in series with a blocking capacitor from the output pin to FB1 pin, without affecting the noise figure. It is housed in a miniature 2.0 x 2.0 x 0.75mm<sup>3</sup> 8-pin Thin Small Leadless Package (TSLP) package. The compact footprint and low profile coupled with low noise, high gain, excellent input return loss and high linearity make the MGA-631P8 an ideal choice as an LNA for cellular infrastructure for GSM, CDMA, GPS and ISM applications.

It is designed for optimum use between 400MHz to 1.5GHz. For optimum performance at higher frequency from 1.4GHz to 3.8GHz, the MGA-632P8 is recommended. Both MGA-631P8 and MGA-632P8 share the same package and pinout.

### Features

- Low noise figure
- Good input return loss
- High linearity performance
- High Isolation
- Externally adjustable supply current, 40-80mA
- Externally adjustable gain, 15-20dB
- GaAs E-pHEMT Technology<sup>[1]</sup>
- Low cost small package size: 2.0x2.0x0.75 mm<sup>3</sup>
- Excellent uniformity in product specifications

### Specifications

900MHz; 4V, 54mA (typ)

- 17.5 dB Gain
- 0.53 dB Noise Figure
- -19.4dB S11
- -34dB S12
- 32.6 dBm Output IP3
- 18.0 dBm Output Power at 1dB gain compression

### Applications

- Low noise amplifier for cellular infrastructure for GSM, CDMA, GPS and ISM.
- Other ultra low noise applications.

Note:

1. Enhancement mode technology employs positive Vgs, thereby eliminating the need of negative gate voltage associated with conventional depletion mode devices.

## MGA-631P8 Absolute Maximum Rating [1]

Symbol	Parameter	Units	Absolute Max.
Vd	Device Supply Voltage	V	5.5
P <sub>in,max</sub>	CW RF Input Power (Vd=4.0V, Vbias=4.0V)	dBm	20
P <sub>diss</sub>	Total Power Dissipation [2]	W	0.55
T <sub>j</sub>	Junction Temperature	°C	150
T <sub>STG</sub>	Storage Temperature	°C	-65 to 150

**Thermal Resistance [3]** (Vd = 4.0V, Vbias=4.0V),  $\theta_{JC} = 47 \text{ °C/W}$

Notes:

1. Operation of this device in excess of any of these limits may cause permanent damage.
2. Board temperature T<sub>b</sub> is 25 °C. Derate 21.2mW/ °C for T<sub>b</sub>>124 °C.
3. Thermal resistance measured using Infra-Red Microscopy Technique.

## Load pull test set up

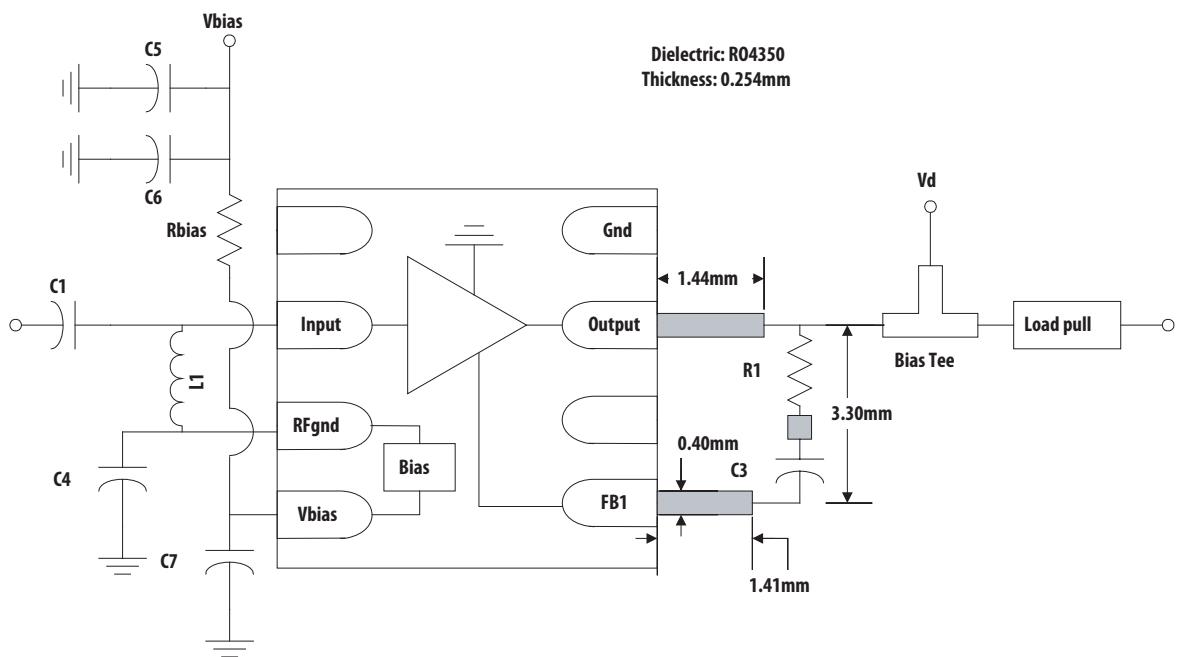

Figure 33. Test setup for load pull data

The input port is matched for good NF and IRL. Because of the high reverse isolation, any change on the output port has a minimum change on the input port. Therefore, only the output port is tuned for the maximum OIP3. R1 is varied for different level of gain Test condition for the OIP3: -20dBm at 900MHz  $\pm 5\text{MHz}$ .

Notes:

1. S-parameters are measured on PCB. The PCB material is 10 mils Roger RO4350. Figure 35 shows the input and output reference plane.

## Ordering Information

Part Number	No. of Devices	Container
MGA-631P8-TR1G	3000	7" Reel
MGA-631P8-TR2G	10000	13" Reel
MGA-631P8-BLKG	100	antistatic bag

## TSLP2X2 Package Dimension

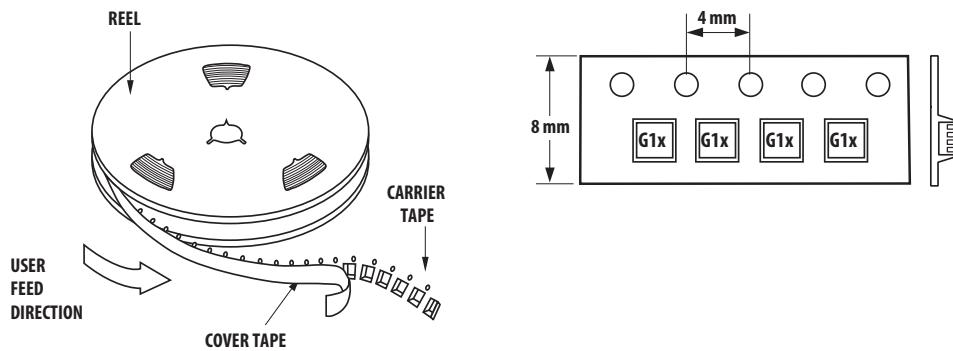

## PCB Land Pattern and Stencil Design

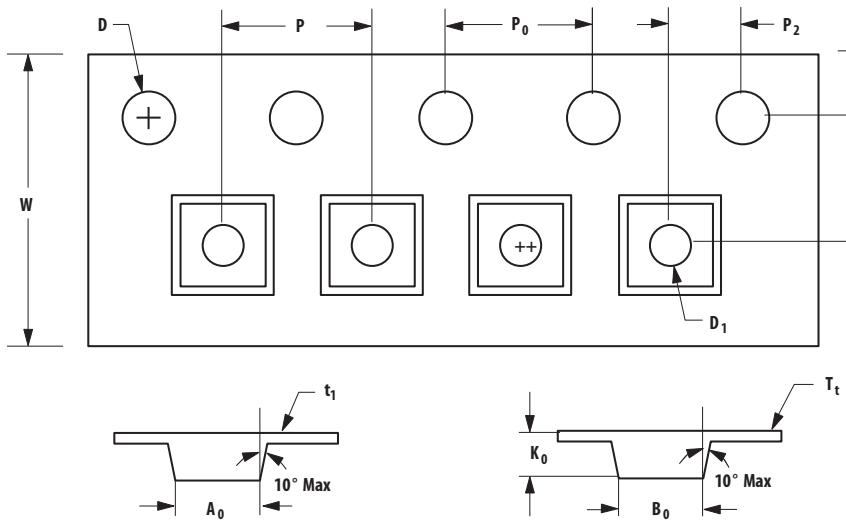

All dimensions are in millimeters (mils)  
Note: 1 mil = 1/1000 inch

## Device Orientation

## Tape Dimensions
