

## Description

The SMM4F Transil serie has been designed to protect sensitive equipment against electro-static discharges according to IEC 61000-4-2, MIL STD 883 Method 3015, and electrical over stress such as IEC 61000-4-4 and 5. They are generally for surges below 400 W 10/1000  $\mu$ s.

This planar technology makes it compatible with high-end equipment and SMPS where low leakage current and high junction temperature are required to provide reliability and stability over time. Their low clamping voltages provide a better safety margin to protect sensitive circuits with extended life time expectancy.

Packaged in STmite Flat, this minimizes PCB space consumption (footprint in accordance with IPC 7531 standard). Transil is a trademark of STMicroelectronics.

Notes:

(1) Pulse test: t<sub>p</sub> < 50 ms.

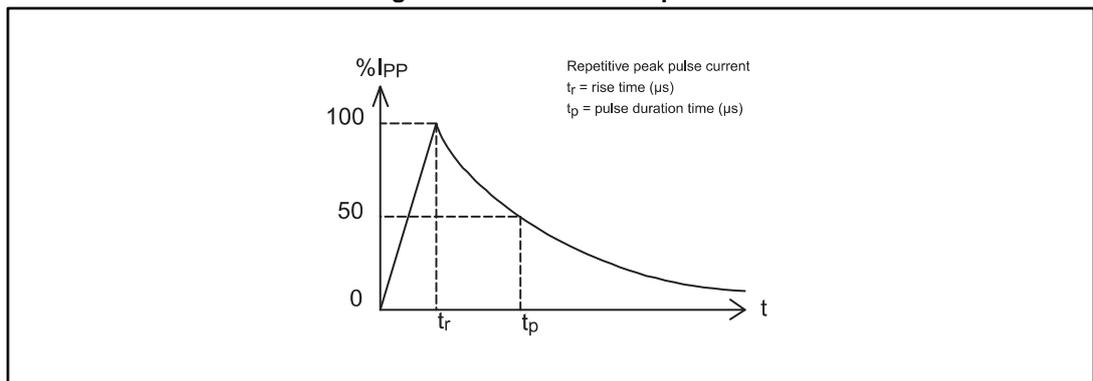

(2) To calculate maximum clamping voltage at other surge currents, use the following formula:

$$V_{CLmax} = R_D \times I_{PP} + V_{BRmax}$$

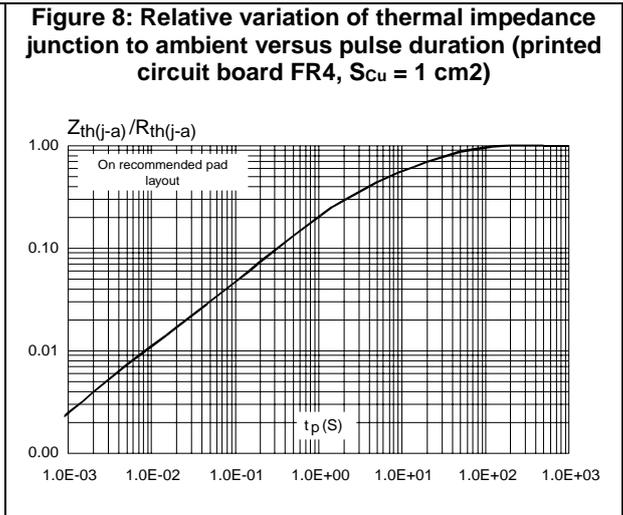

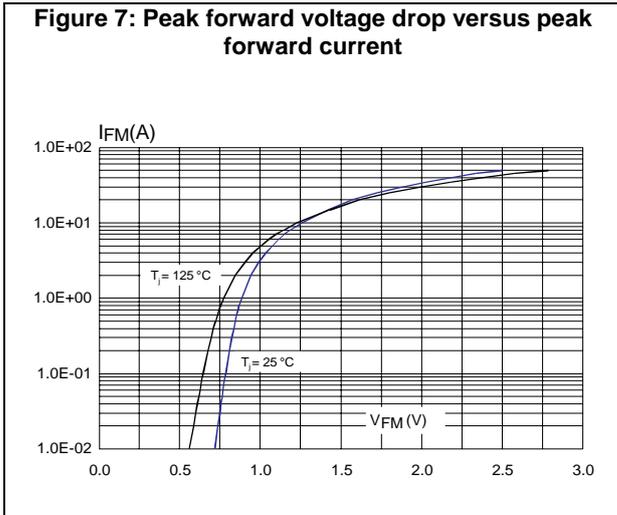

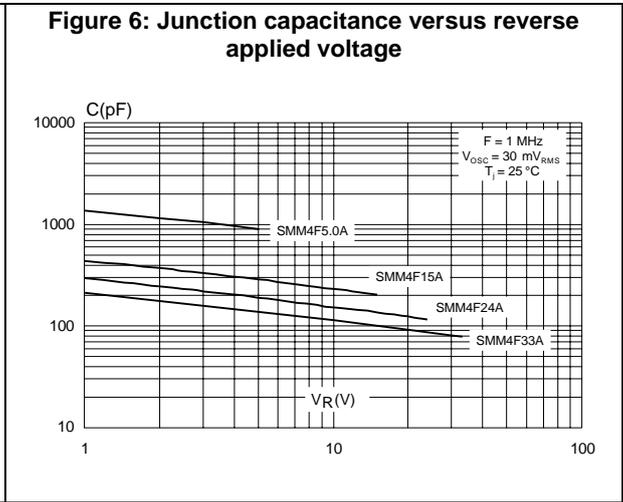

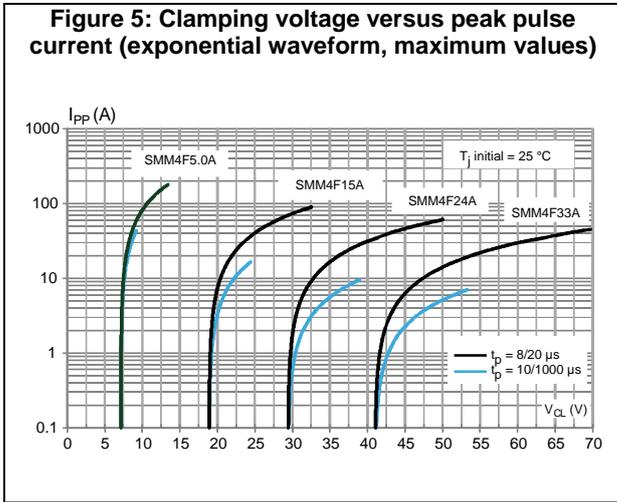

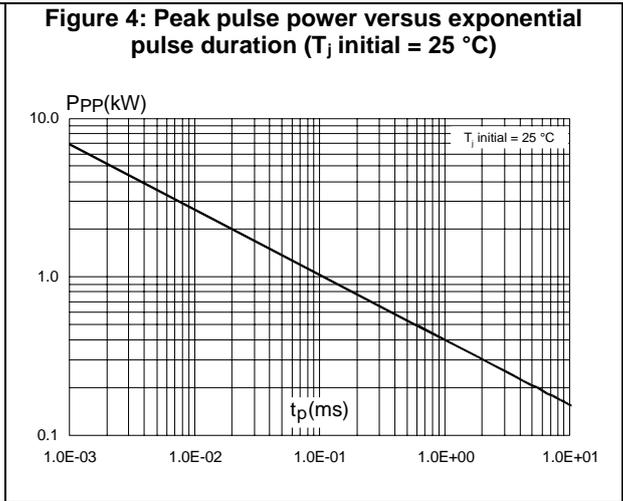

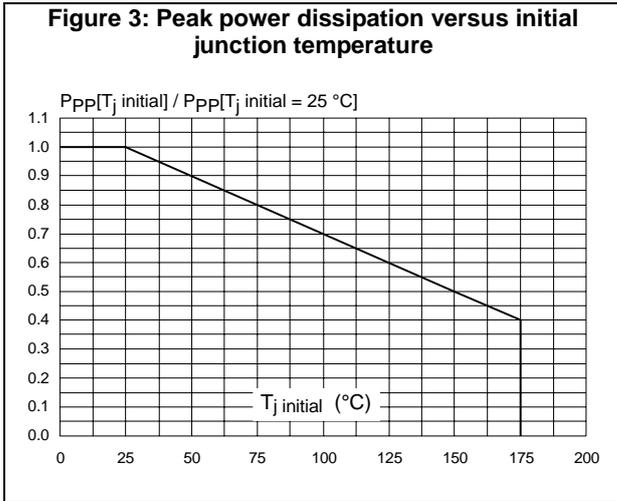

(3) To calculate V<sub>BR</sub> versus junction temperature, use the following formula:

$$V_{BR} \text{ at } T_j = V_{BR} @ 25 \text{ °C} \times (1 + \alpha T \times (T_j - 25))$$
