### Description

The ST2G3236 is a dual supply low voltage CMOS 2-bit Bus Transceiver fabricated with sub-micron silicon gate and five-layer metal wiring C2MOS technology. Designed for use as an interface between a  $3.3\text{V}$  bus and a  $2.5\text{V}$  or  $1.8\text{V}$  bus in a mixed  $3.3\text{V}/1.8\text{V}$ ,  $3.3\text{V}/2.5\text{V}$  and  $2.5\text{V}/1.8\text{V}$  supply systems, it achieves high speed operation while maintaining the CMOS low power dissipation.

This IC is intended for two-way asynchronous communication between data buses and the direction of data transmission is determined by DIR inputs. The A-port interfaces with the  $3\text{V}$  bus, the B-port with the  $2.5\text{V}$  and  $1.8\text{V}$  bus.

All inputs are equipped with protection circuits against static discharge, giving them  $2\text{kV}$  ESD immunity and transient excess voltage.
