

Trench gate field-stop IGBT, HB series  
650 V, 40 A high speed

Datasheet - production data

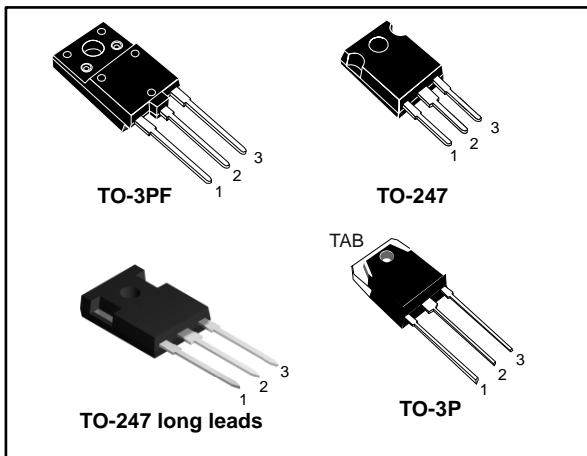

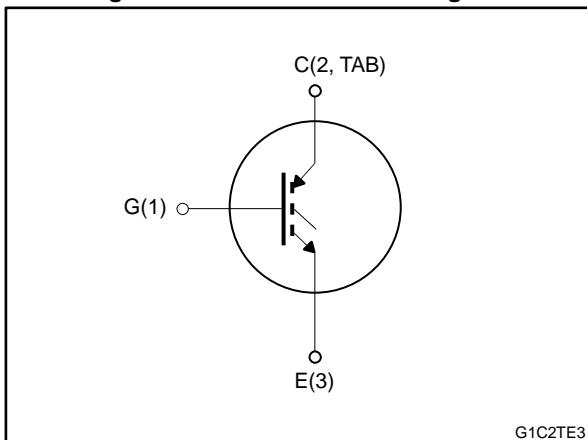

Figure 1: Internal schematic diagram

## Features

- Maximum junction temperature:  $T_J = 175 \text{ }^{\circ}\text{C}$
- High speed switching series
- Minimized tail current
- Very low saturation voltage:  $V_{CE(sat)} = 1.6 \text{ V (typ)}$  @  $I_C = 40 \text{ A}$
- Safe paralleling
- Tight parameter distribution
- Low thermal resistance

## Applications

- Photovoltaic inverters
- High frequency converters

## Description

These devices are IGBTs developed using an advanced proprietary trench gate field-stop structure. These devices are part of the new HB series of IGBTs, which represent an optimum compromise between conduction and switching loss to maximize the efficiency of any frequency converter. Furthermore, the slightly positive  $V_{CE(sat)}$  temperature coefficient and very tight parameter distribution result in safer paralleling operation.
