

3.3 V RS485 compatible with 1.8 V I/Os and selectable speed 20 Mbps or 250 kbps

DFN10 3 x 3

Features

- Half-duplex RS485 transceiver
- 1.65 V to 3.6 V supply for data and enable signals
- 3 V to 3.6 V supply for bus supply
- High speed: up to 20 Mbps data rate
- Low speed selected by SLR pin : 250 kbps
- Up to 256 transceivers on the bus
- Fail safe receiver (bus open, idle and shorted)
- Thermal shutdown protection
- Low quiescent current in shutdown mode
- Extended temperature range : -40 °C to +105 °C
- Available in industry standard DFN10
- Bus-pin protection more than:
 - ±4 kV HBM protection
 - ±8 kV IEC61000-4-2 contact discharge
 - ±16 kV IEC61000-4-2 air discharge
 - Compliant IEC61000-4-4 fast transient burst Class B

Description

The **STR485** is a low power differential line transceiver for data transmission standard RS485 applications in half-duplex mode. Data and enable signals are compatible with 1.8 V or 3.3 V supplies.

Two speeds are selectable through SLR pin: fast data rate up to 20 Mbps or slow data rate for extended cable running to 250 kbps.

Excessive power dissipation caused by bus contention or faults is prevented by thermal shutdown circuit that forces the driver outputs into a high impedance state. The receiver has a fail-safe feature, which guarantees a high output state when the inputs are left open, shorted or idle.

STR485

1 Pin connections

Figure 1. Pin connections

Table 1. Pin description

Name	Pin	I/O	Description
VL	1	Logic supply	1.65 V to 3.6 V supply for logic I/O signals
R	2	Digital output	Receiver data output
DE	3	Digital input	Driver enable input
nRE	4	Digital input	Receiver enable input
D	5	Digital input	Transmission data input
GND	6	Ground	
SLR	7	Digital input	Slew rate select: low = 20 Mbps, high = 250 kbps. Default to 20 Mbps if SLR is left floating
A	8	Bus I/O	Digital bus I/O, A
B	9	Bus I/O	Digital bus I/O, B
VCC	10	Bus supply	3 V to 3.6 V supply for A and B bus lines

Figure 2. Typical application schematic

Figure 3. Example of implementation in a PCB

Adding an ESDA14V2BP6 or ETP01-2821 ST Microelectronics protection device can help the product to sustain an EFT perturbation level up to 4 kV.

2 Truth tables

The STR485 is a half-duplex differential driver/receiver compliant to the RS485 communication standard (ISO-IEC 8482). This product is perfectly adapted for low voltage application running with a low power supplies VL, generally set to 1.8 V and VCC set to 3.3 V.

These voltages confer a low power consumption to the product.

SLR is the data rate selection, this pin could be let floating but it is not recommended; in that case the high speed rate is automatically selected.

The SLR pin must be connected to the ground to provide a high speed communication up to 20 Mbps.

When this pin is connected to VL power supply, the data rate is limited to 250 kbps more adapted for very long distance data transmission.

Figure 4. Block diagram

The product is perfectly adapted to run with 256 devices on the same bus thanks to the internal output resistance that is over 96 kΩ up to 105 °C; this resistance follows the RS485 condition that requests a minimum of 12 kΩ for 32 unit loads (UL).

The STR485 has internal protection against ESD that protect each device driver output and receiver input. The limits have been tested up to ±4 kV electrostatic discharge (HBM) and ± 8 kV contact discharge and ± 16 kV air discharge shocks without latch-up.

Another external protections can be used to increase the communication robustness against different perturbation that can be seen on the application.

The power supplies must be well-decoupled by a minimal capacitor of 0.1 μF as closed as possible to the device power supply input. Moreover, the capacitor should be higher on the application with a minimum of 1 μF around the device.

The device operating range is set from VL = 1.65 V to 3.6 V and for VCC = 3.0 V to 3.6 V. In any case VCC must be higher or equal than VL.

The applications should respect this voltage constraints to let the application communication device run to the best conditions.

Figure 5. Example of typical application

Table 2. Driver truth table

INPUT D	ENABLE DE	OUTPUT A	OUTPUT B	Function
H	H	H	L	Actively drive bus high
L	H	L	H	Actively drive bus low
X	L	Z	Z	Driver disabled
X	Open	Z	Z	Driver disabled by default
Open	H	H	L	Actively drive bus high by default

Table 3. Receiver truth table

Differential input $V_{ID} = V_A - V_B$	ENABLE RE	OUTPUT R	Function
$V_{ID} > V_{IT+}$	L	H	Receive valid bus high
$V_{IT-} < V_{ID} < V_{IT+}$	L	?	Indeterminate bus state
$V_{ID} < V_{IT-}$	L	L	Receive valid bus low
X	H	Z	Receiver disabled
X	OPEN	Z	Receiver disabled by default
Open-circuit bus	L	H	Fail safe high output
Short-circuit bus	L	H	Fail safe high output
Idle (terminated) bus	L	H	Fail safe high output

Table 4. Speed selection, SLR pin configuration

SLR	Data rate	Typical t_r / t_f
VL	250 kbps	200 ns
GND or OPEN	20 Mbps	7 ns

3 Absolute maximum ratings and operating conditions

Table 5. Absolute maximum ratings

Symbol	Parameter	Min.	Max.	Unit
V_L	Control supply voltage	-0.5	4	V
V_{CC}	Bus supply voltage	-0.5	4.8	V
	Voltage range at A or B inputs	-13	13	V
	Input voltage range at any logic pin	-0.3	$V_L+0.3$	V
	Receiver output current	-12	12	mA
T_J	Junction temperature		170	°C
T_{stg}	Storage temperature	-65	150	°C
ESD	IEC 61000-4-2 ESD (air-gap discharge), bus terminals and GND		± 16	kV
	IEC 61000-4-2 ESD (contact discharge), bus terminals and GN		± 8	kV
	IEC 61000-4-4 EFT (fast transient or burst) bus terminals and GND		± 2	kV
	JEDEC standard 22, test method A114, HBM, all terminals		± 4	kV
	JEDEC standard 22, test method C101, (charged device model), all pins		± 1.5	kV

Note: All voltage values, except the differential voltage, are with respect to network ground terminal.

Table 6. Operating conditions

Symbol	Parameter	Min.	Typ.	Max.	Unit
V_L	Control supply voltage	1.65		3.6	V
V_{CC}	Bus supply voltage	3	3.3	3.6	
V_I	Input level at any bus terminal (separately or common mode)	-7		12	
V_{IH}	High level input voltage (driver, driver enabled, receiver enable inputs, and slew rate select)	$0.7 \times V_L$		V_L	
V_{IL}	Low level input voltage (driver, driver enable, receiver enable inputs, and slew rate select)	0		$0.3 \times V_L$	
V_{ID}	Differential input voltage	-12		12	mA
IO	Output current / driver	-80		80	
	Output current / receiver	- 2		2	
R_L	Differential load resistance	54	60		Ω
C_L	Differential load capacitance		50		pF
D_R	Signaling rate / SLR = '0'			20	Mbps
	Signaling rate / SLR = '1'			250	kbps
T_A	Operating free-air temperature	-40		105	°C

Operation is specified for internal (junction temperature) up to 150 °C. Self-heating due to internal power dissipation should be considered for each application. Maximum junction temperature is internally limited by the thermal shut-down circuit which disables the driver outputs when the junction temperature reaches 165 °C.

Table 7. Thermal information

Symbol	Parameter	Min.	Typ.	Max.	Unit
R_{th-ja}	Thermal resistance, junction-to-ambient		40		°C/W
R_{th-jc}	Thermal resistance, junction-to-case		5.2		

4 Electrical characteristics

Table 8. Receiver: over recommended operating conditions (unless otherwise specified. Please, see "Operating conditions" table)

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
Receiver/DC						
V _{IT+}	Positive-going receiver differential input voltage threshold		(1)	-60	-20	mV
