

Wireless motion detector based on Bluetooth® Low Energy and PIR sensor

Features

- [BlueNRG-M2SA](#) module for communication
- Signal conditioning based on [TSU102](#)
- Window comparator based on [TS883](#)
- [STLQ020](#) power management
- CR2032 coin cell battery
- Connectivity with [STBLESensor](#) app
- Motion detection range up to 5 m
- Low-power design
- RoHS compliant

Description

The [STEVAL-BLUEPIRV1](#) evaluation board is an application example design of a wireless motion detector based on a passive infrared (PIR) sensor and featuring Bluetooth® Low Energy wireless connectivity.

The passive infrared sensors are the most used sensors for motion detection, thanks to their low-power consumption and price.

The [STEVAL-BLUEPIRV1](#) evaluation board uses IRA-S210ST01 by Murata. The detection range of the IML-0688 Fresnel lens is up to 5 m.

The on-board low-power [TSU102](#) CMOS op-amp and [TS883](#) comparator perform the analog signal conditioning with a power consumption in a sub-μA range.

The embedded [BlueNRG-M2SA](#) FCC and IC certified radio module (FCC ID: S9N-BNRGM2S and IC: 8976CBNRGM2SA), which integrates an application microcontroller based on an Arm®Cortex®-M0 core, features the Bluetooth® Low Energy connectivity.

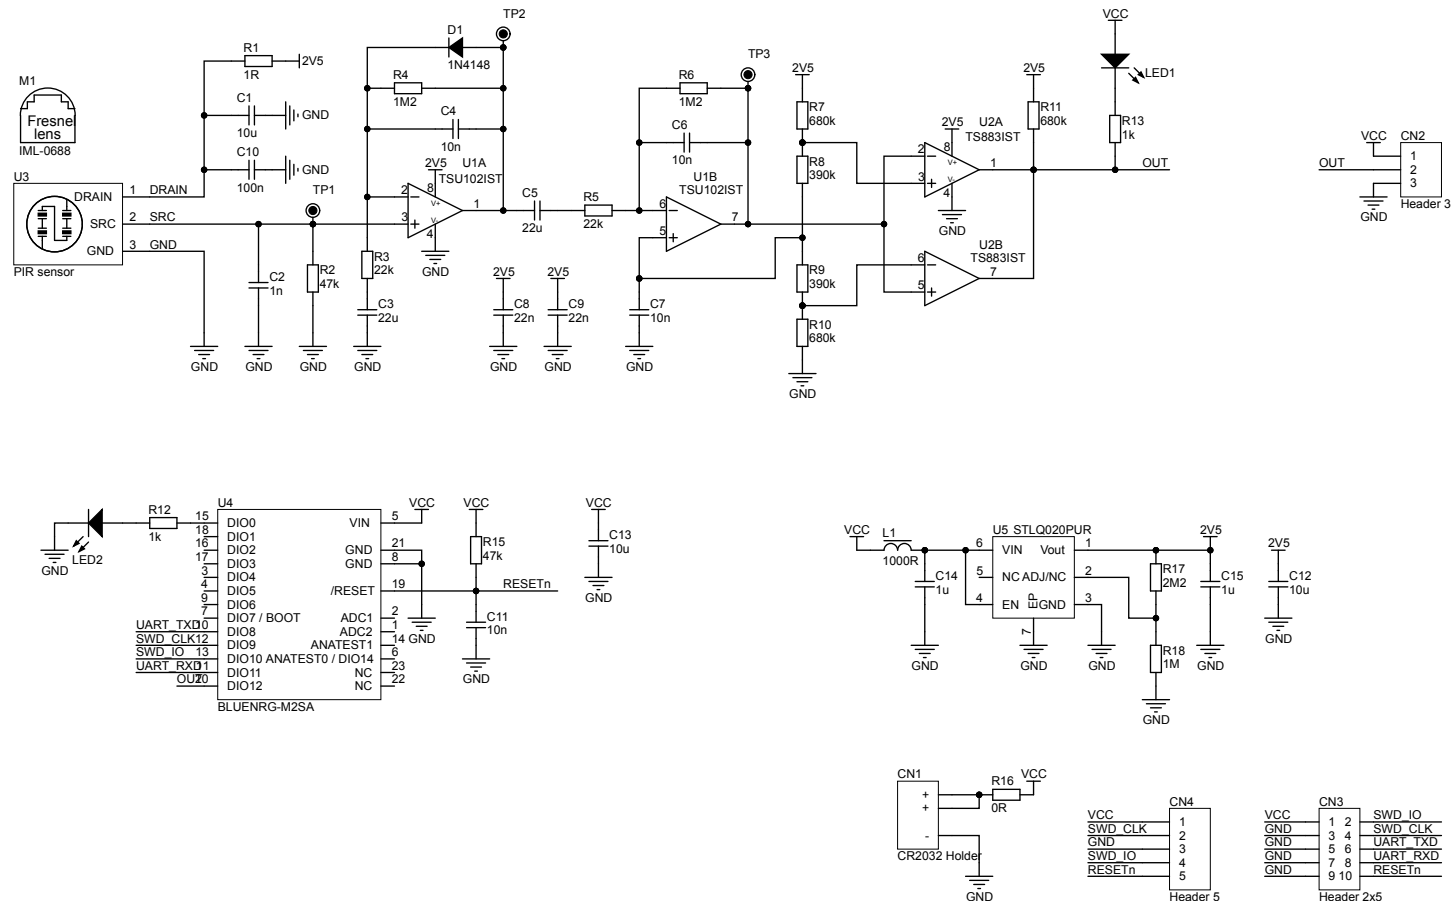

The whole design has been built by focusing on low-power consumption. Even though powered via a CR2032 coin-cell battery, the board expected lifetime is around a year.

Product summary

Wireless motion detector based on Bluetooth® Low Energy and PIR sensor	STEVAL-BLUEPIRV1
Very low power application processor module for Bluetooth® Low Energy v5.2	BlueNRG-M2SA
Nanopower (580 nA) rail-to-rail I/O 5 V CMOS op-amp	TSU102IST
Rail-to-rail 0.9 V nanopower, open drain dual comparators	TS883IST
Bluetooth® Low Energy sensor application for Android and iOS	STBLESensor
Application	Industrial Sensors
