

# UCCx808-x Low Power Current Mode Push-Pull PWM

## 1 Features

- Dual Output Drive Stages in Push-Pull Configuration
- 130- $\mu$ A Typical Starting Current
- 1-mA Typical Run Current
- Operation to 1-MHz
- Internal Soft-Start
- On-Chip Error Amplifier With 2-MHz Gain Bandwidth Product
- On-Chip VDD Clamping
- Output Drive Stages Capable Of 500-mA Peak Source Current, 1-A Peak Sink Current

## 2 Applications

- Server and Desktop Power Supplies
- Telecom Power Supplies
- DC-DC Converters
- Switched-Mode Power Supplies

## 3 Description

The UCCx808-x is a family of BiCMOS push-pull, high-speed, low-power, pulse-width modulators. The UCCx808 contains all of the control and drive circuitry required for offline or DC-to-DC fixed frequency current-mode switching power supplies with minimal external parts count.

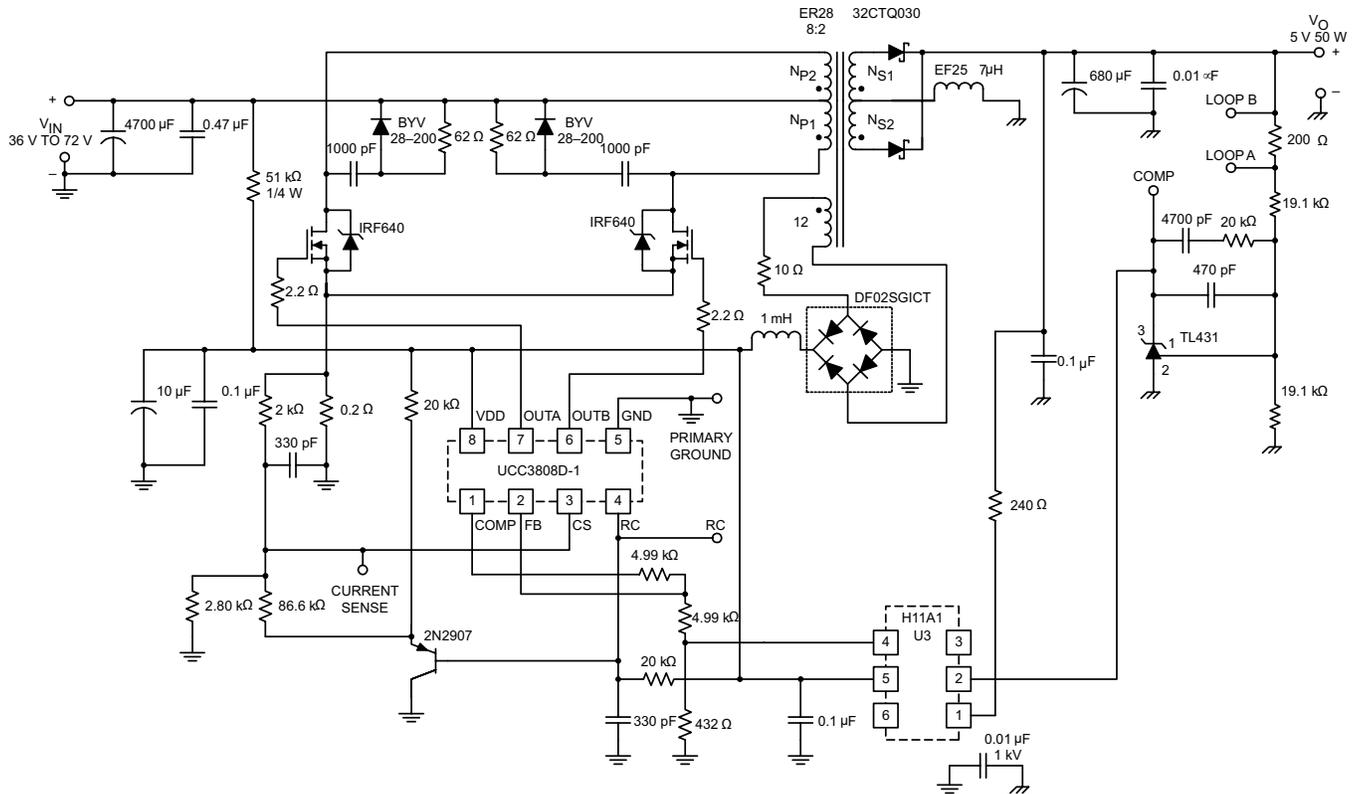

The UCCx808-x dual output drive stages are arranged in a push-pull configuration. Both outputs switch at half the oscillator frequency using a toggle flip-flop. The dead time between the two outputs is typically 60 ns to 200 ns depending on the values of the timing capacitor and resistors, thus limiting each output stage duty cycle to less than 50%.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
UCC2808-1 UCC2808-2	SOIC (8)	4.90 mm x 3.91 mm
UCC3808-1 UCC3808-2	PDIP (8)	9.81 mm x 6.35 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Pin Configuration and Functions

### Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
COMP	1	I/O	Output of the error amplifier and the input of the PWM comparator.
CS	3	I	Input to the PWM, peak current, and overcurrent comparators.
FB	2	I	Inverting input to the error amplifier.
GND	5	—	Reference ground and power ground for all functions.
OUTA	7	O	Alternating high current output stage.
OUTB	6	O	Alternating high current output stage.
RC	4	I	Oscillator programming pin.
VDD	8	—	Power input connection for this device.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Supply voltage (IDD ≤ 10 mA)		15	V
Supply current		20	mA
OUTA/OUTB source current (peak) <sup>(2)</sup>	−0.5		A
OUTA/OUTB sink current (peak) <sup>(2)</sup>		1.0	A
Analog inputs (FB, CS) − 0.3 V to VDD+0.3 V		6	V
Power dissipation at T <sub>A</sub> = 25 °C (N Package)		1	W
Power dissipation at T <sub>A</sub> = 25 °C (D Package)		650	mW
Power dissipation at T <sub>A</sub> = 25 °C (PW Package)		400	mW
T <sub>J</sub> Junction temperature	−55	150	°C
Lead temperature (soldering, 10 sec.)		300	°C
T <sub>stg</sub> Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Currents are positive into, negative out of the specified terminal. Consult Packaging Section of the Power Supply Control Data Book (SLUD003) for thermal limitations and considerations of packages.

### 6.2 ESD Ratings

	VALUE	UNIT
V <sub>(ESD)</sub> Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2500
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	MAX	UNIT
V <sub>DD</sub> Supply Voltage	UCCx808-1	13	14
	UCCx808-2	5	14
T <sub>J</sub> Junction Temperature	UCC2808-x	−40	85
	UCC3808-x	0	70

### 6.4 Electrical Characteristics

 T<sub>A</sub> = 0°C to 70°C for the UCC3808-x, −40°C to 85°C for the UCC2808-x and −55°C to 125°C for the UCC1808-x, V<sub>DD</sub> = 10 V<sup>(1)</sup>, 1-μF capacitor from V<sub>DD</sub> to GND, R = 22 kΩ, C = 330 pF, T<sub>A</sub> = T<sub>J</sub>, (unless otherwise specified)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>OSCILLATOR SECTION</b>					
Oscillator frequency		175	194	213	kHz
Oscillator amplitude/V <sub>DD</sub> <sup>(2)</sup>		0.44	0.5	0.56	V/V
<b>ERROR AMPLIFIER SECTION</b>					
Input voltage	COMP = 2 V	1.95	2	2.05	V
Input bias current		−1		1	μA
Open-loop voltage gain		60	80		dB
COMP sink current	FB = 2.2 V, COMP = 1 V	0.3	2.5		mA

- (1) Does not include current in the external oscillator network.
- (2) Measured at RC. Signal amplitude tracks V<sub>DD</sub>.

**Electrical Characteristics (continued)**

$T_A = 0^\circ\text{C}$  to  $70^\circ\text{C}$  for the UCC3808-x,  $-40^\circ\text{C}$  to  $85^\circ\text{C}$  for the UCC2808-x and  $-55^\circ\text{C}$  to  $125^\circ\text{C}$  for the UCC1808-x,  $V_{DD} = 10\text{ V}^{(1)}$ , 1- $\mu\text{F}$  capacitor from  $V_{DD}$  to  $\text{GND}$ ,  $R = 22\text{ k}\Omega$ ,  $C = 330\text{ pF}$ ,  $T_A = T_J$ , (unless otherwise specified)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
COMP source current	FB = 1.3 V, COMP = 3.5 V	-0.25	-0.5		mA
<b>PWM SECTION</b>					
Maximum duty cycle	Measured at OUTA or OUTB	48%	49%	50%	
Minimum duty cycle	COMP = 0 V			0%	
<b>CURRENT SENSE SECTION</b>					
Gain <sup>(3)</sup>		1.9	2.2	2.5	V/V
Maximum input signal	COMP = 5 V <sup>(4)</sup>	0.45	0.5	0.55	V
CS to output delay	COMP = 3.5 V, CS from 0 to 600 mV		100	200	ns
CS source current		-200			nA
Over current threshold		0.7	0.75	0.8	V
COMP to CS offset	CS = 0 V	0.35	0.8	1.2	V
<b>OUTPUT SECTION</b>					
OUT low level	I = 100 mA		0.5	1	V
OUT high level	I = -50 mA, VDD – OUT		0.5	1	V
Rise time	$C_L = 1\text{ nF}$		25	60	ns
Fall time	$C_L = 1\text{ nF}$		25	60	ns
<b>UNDERVOLTAGE LOCKOUT SECTION</b>					
Start threshold	UCCx808-1 <sup>(1)</sup>	11.5	12.5	13.5	V
	UCCx808-2	4.1	4.3	4.5	
Minimum operating voltage after start	UCCx808-1	7.6	8.3	9	V
	UCCx808-2	3.9	4.1	4.3	
Hysteresis	UCCx808-1	3.5	4.2	5.1	V
	UCCx808-2	0.1	0.2	0.3	
<b>SOFT-START SECTION</b>					
COMP rise time	FB = 1.8 V, rise from 0.5 V to 4 V		3.5	20	ms
<b>OVERALL SECTION</b>					
Start-up current	VDD < start threshold		130	260	$\mu\text{A}$
Operating supply current	FB = 0 V, CS = 0 V <sup>(5) (1)</sup>		1	2	mA
VDD zener shunt voltage	IDD = 10 mA <sup>(6)</sup>	13	14	15	V

$$A = \frac{\Delta V_{\text{COMP}}}{\Delta V_{\text{CS}}}, 0 \leq V_{\text{CS}} \leq 0.4\text{ V}$$

- (3) Gain is defined by:  $A = \frac{\Delta V_{\text{COMP}}}{\Delta V_{\text{CS}}}, 0 \leq V_{\text{CS}} \leq 0.4\text{ V}$
- (4) Parameter measured at trip point of latch with FB at 0 V.
- (5) For UCCx808 – 1, set VDD above the start threshold before setting at 10 V
- (6) Start threshold and Zener shunt threshold track one another.

## 7 Detailed Description

### 7.1 Overview

The UCCx808-x device is a highly-integrated, low power current mode push-pull PWM controller. The controller employs low starting current, and employs an internal control algorithm that offers accurate static output voltage regulation against line and load. The UCCx808-x family offers a variety of package temperature range options, and choice of undervoltage lockout levels. The family has UVLO thresholds and hysteresis options for offline and battery-powered system.

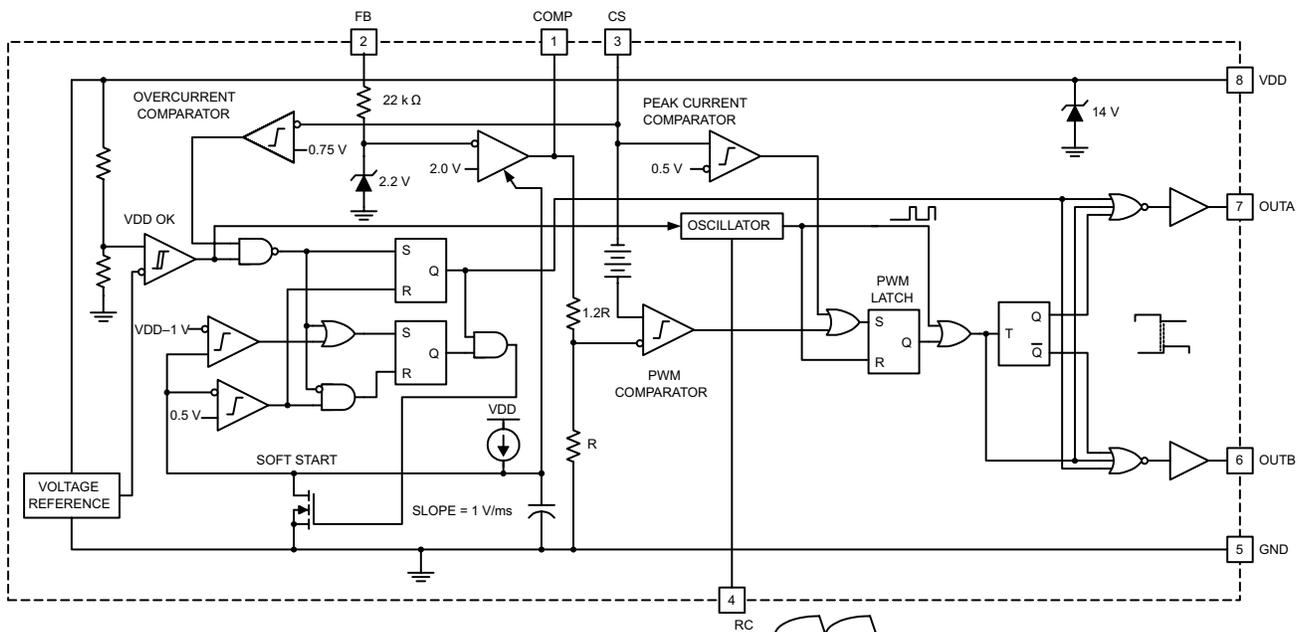

**Table 1. Undervoltage Lockout Levels**

PART NUMBER	TURN ON THRESHOLD	TURN OFF THRESHOLD
UCCx808-1	12.5 V	8.3 V
UCCx808-2	4.3 V	4.1 V

**Table 2. Undervoltage Lockout Options**

$T_A = T_J$	PACKAGED DEVICES		
	UVLO OPTION	SOIC (D)	PDIP (N)
-40°C to 85°C	12.5 V/8.3 V	UCC2808D-1	UCC2808N-1
	4.3 V/4.1 V	UCC2808D-2	UCC2808N-2
0°C to 70°C	12.5 V/8.3 V	UCC3808D-1	UCC3808N-1
	4.3 V/4.1 V	UCC3808D-2	UCC3808N-2

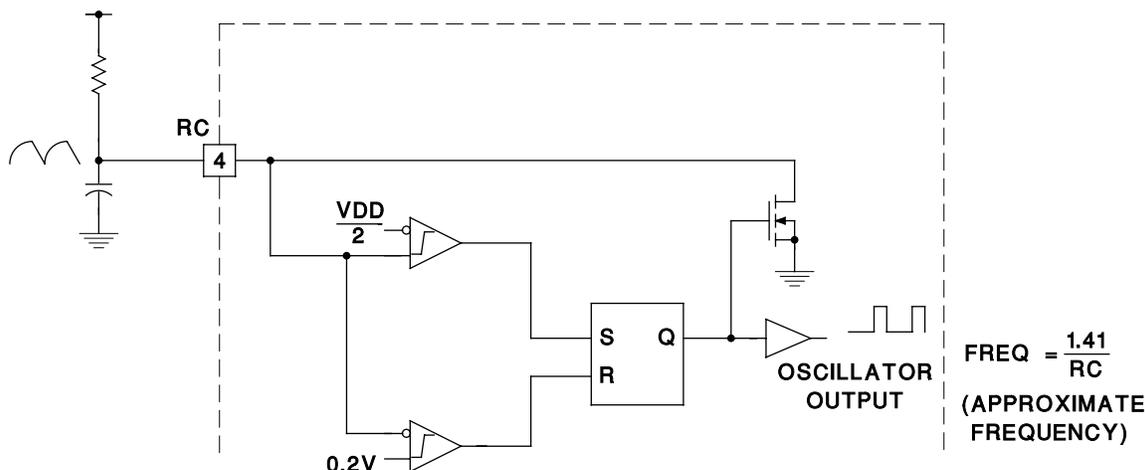

### 7.2 Functional Block Diagram

Pinout shown is for SOIC and PDIP packages.

**Figure 4. Functional Block Diagram**

## Functional Block Diagram (continued)

The oscillator generates a sawtooth waveform on RC. During the RC rise time, the output stages alternate on time, but both stages are off during the RC fall time. The output stages switch at  $\frac{1}{2}$  the oscillator frequency, with guaranteed duty cycle of <50% for both outputs.

**Figure 5. Block Diagram for Oscillator**

## 7.3 Feature Description

### 7.3.1 Pin Descriptions

**COMP:** COMP is the output of the error amplifier and the input of the PWM comparator. The error amplifier in the UCC3808 is a true low-output impedance, 2-MHz operational amplifier. As such, the COMP pin can both source and sink current. However, the error amplifier is internally current limited, so that zero duty cycle can be externally forced by pulling COMP to GND.

The UCC3808 family features built-in full cycle soft-start. Soft-start is implemented as a clamp on the maximum COMP voltage.

**CS:** The input to the PWM, peak current, and overcurrent comparators. The overcurrent comparator is only intended for fault sensing. Exceeding the overcurrent threshold will cause a soft-start cycle.

**FB:** The inverting input to the error amplifier. For best stability, keep FB lead length as short as possible and FB stray capacitance as small as possible.

**GND:** Reference ground and power ground for all functions. Due to high currents, and high frequency operation of the UCC3808, a low impedance circuit board ground plane is highly recommended.

**OUTA and OUTB:** Alternating high current output stages. Both stages are capable of driving the gate of a power MOSFET. Each stage is capable of 500-mA peak source current, and 1-A peak sink current.

The output stages switch at half the oscillator frequency, in a push/pull configuration. When the voltage on the RC pin is rising, one of the two outputs is high, but during fall time, both outputs are off. This dead time between the two outputs, along with a slower output rise time than fall time, insures that the two outputs can not be on at the same time. This dead time is typically 60 ns to 200 ns and depends upon the values of the timing capacitor and resistor.

The high-current output drivers consist of MOSFET output devices, which switch from VDD to GND. Each output stage also provides a very low impedance to overshoot and undershoot. This means that in many cases, external schottky clamp diodes are not required.

**RC:** The oscillator programming pin. The oscillator of the UCC3808-x tracks VDD and GND internally, so that variations in power supply rails minimally affect frequency stability. [Figure 5](#) shows the oscillator block diagram.

Only two components are required to program the oscillator: a resistor (tied to the VDD and RC), and a capacitor (tied to the RC and GND). The approximate oscillator frequency is determined by the simple formula:

## Feature Description (continued)

$$f_{\text{OSCILLATOR}} = \frac{1.41}{RC}$$

where

- frequency is in hertz, resistance in ohms, and capacitance in farads. (1)

The recommended range of timing resistors is between 10 kΩ and 200 kΩ and range of timing capacitors is between 100 pF and 1000 pF. Timing resistors less than 10 kΩ must be avoided.

For best performance, keep the timing capacitor lead to GND as short as possible, the timing resistor lead from VDD as short as possible, and the leads between timing components and RC as short as possible. Separate ground and VDD traces to the external timing network are encouraged.

VDD: The power input connection for this device. Although quiescent VDD current is very low, total supply current will be higher, depending on OUTA and OUTB current, and the programmed oscillator frequency. Total VDD current is the sum of quiescent VDD current and the average OUT current. Knowing the operating frequency and the MOSFET gate charge (Q<sub>g</sub>), average OUT current can be calculated from:

$$I_{\text{OUT}} = Q_g F$$

where

- F is frequency To prevent noise problems, bypass VDD to GND with a ceramic capacitor as close to the chip as possible along with an electrolytic capacitor. (2)

A 1-μF decoupling capacitor is recommended.

## 7.4 Device Functional Modes

### 7.4.1 VCC

When VCC becomes above 12.5 V (for UCCx808-1) or 4.3 V (for UCCx808-2), the device is enable, and after all fault conditions are cleared, the gate driver starts with soft-start. When VCC drops below 8.3 V (for UCCx808-1) or 4.1 V (for UCCx808-2), the device enters the UVLO protection mode and both gate drivers are actively pulled low.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The UCCx808-x PWM controller contains all of the features needed to implement push-pull topology, using current-mode control in a small 8-pin package. The UCCx808-x is designed for current-mode control push-pull topology. UCCx808-x employs advantages of current-mode control, peak current sense, overcurrent protection.

### 8.2 Typical Application

A 200-kHz push-pull application circuit with a full wave rectifier is shown in [Figure 6](#).

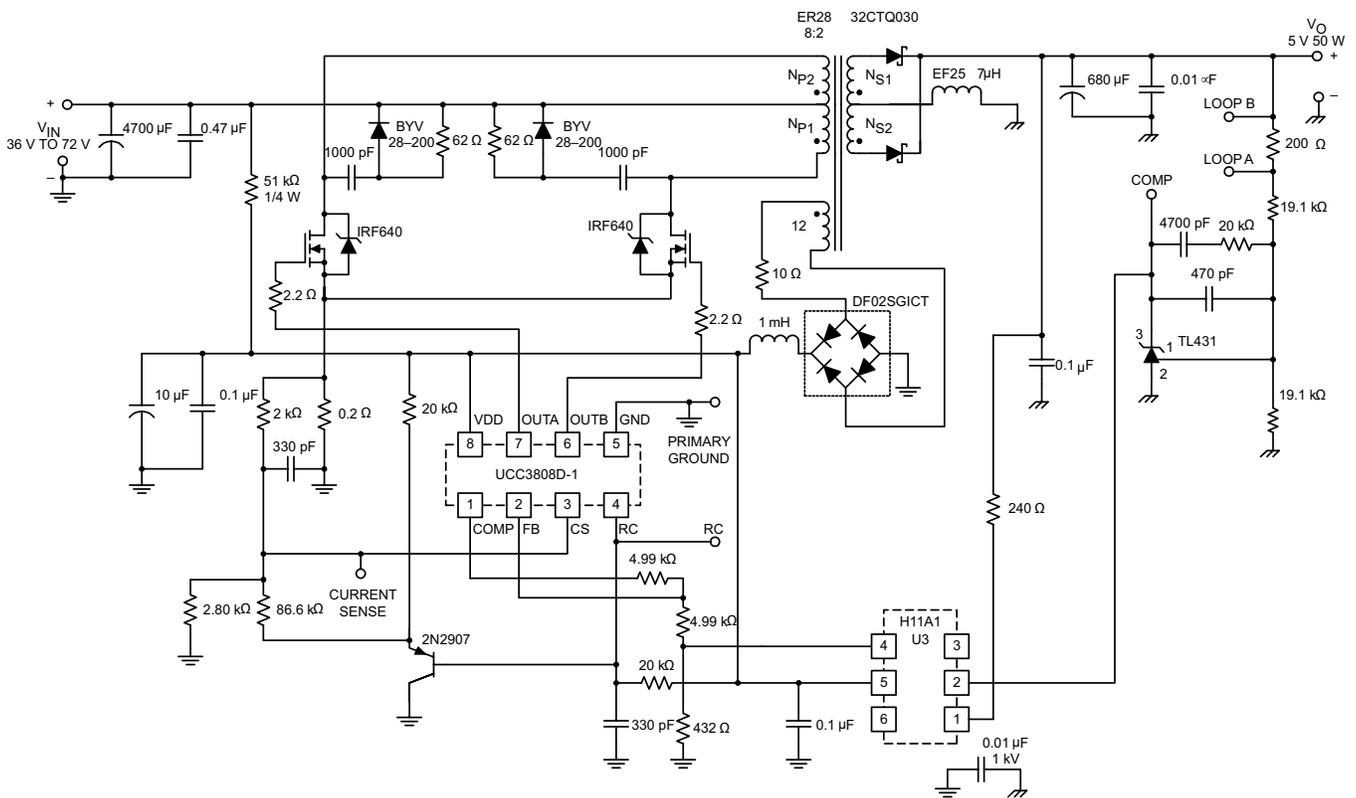

Figure 6. Typical Application Diagram: 48-V In, 5-V, 50-W Output

#### 8.2.1 Design Requirements

Table 3 lists the design parameters of the UCC3808-x.

Table 3. Design Parameters

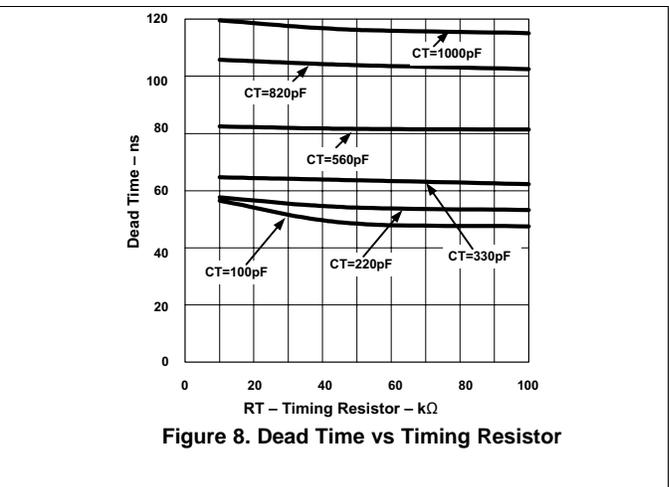

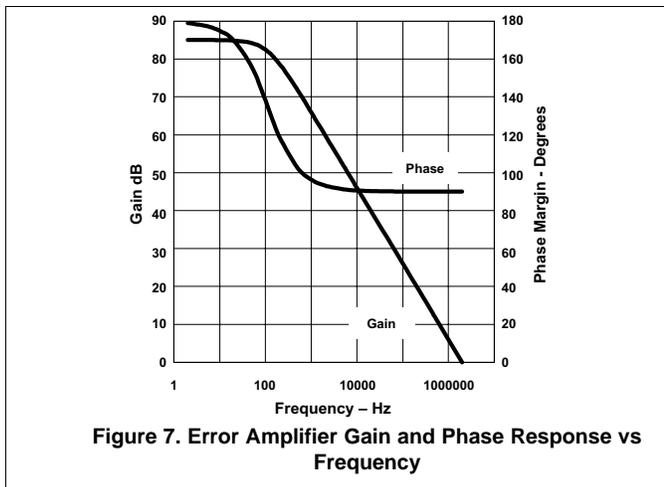

DESIGN PARAMETER	TARGET VALUE
Output voltage	5 V
Rated output power	50 W
Input DC voltage range	36 V to 72 V
Switching frequency	210 kHz

### 8.2.2 Detailed Design Procedure

The output, VO, provides 5 V at 75 W maximum and is electrically isolated from the input. Since the UCC3808 is a peak current mode controller the 2N2222A emitter following amplifier (buffers the CT waveform) provides slope compensation which is necessary for duty ratios greater than 50%. Capacitor decoupling is very important with a single ground IC controller, and a 1  $\mu$ F is suggested as close to the IC as possible. The controller supply is a series RC for start-up, paralleled with a bias winding on the output inductor used in steadystate operation.

Isolation is provided by an optocoupler with regulation done on the secondary side using the UC3965 Precision Reference with Low Offset Error Amplifier. Small signal compensation with tight voltage regulation is achieved using this part on the secondary side. Many choices exist for the output inductor depending on cost, volume, and mechanical strength. Several design options are iron powder, molypermalloy (MPP), or a ferrite core with an air gap as shown here. The main power transformer is a low profile design, EFD size 25, using Magnetics Inc. P material which is a good choice at this frequency and temperature. The input voltage may range from 36 V DC to 72 V DC.

### 8.2.3 Application Curves

## 9 Power Supply Recommendations

The VDD power terminal for the device requires the placement of electrolytic capacitor as energy storage capacitor, because of UCCx808-x is controller with 1-A driver capability. And requires the placement of low-ESR noise-decoupling capacitance as directly as possible from the VDD terminal to the GND terminal, ceramic capacitors with stable dielectric characteristics over temperature are recommended, such as X7R or better. The recommended electrolytic capacitor is a 10- $\mu$ F or 25-V capacitor.

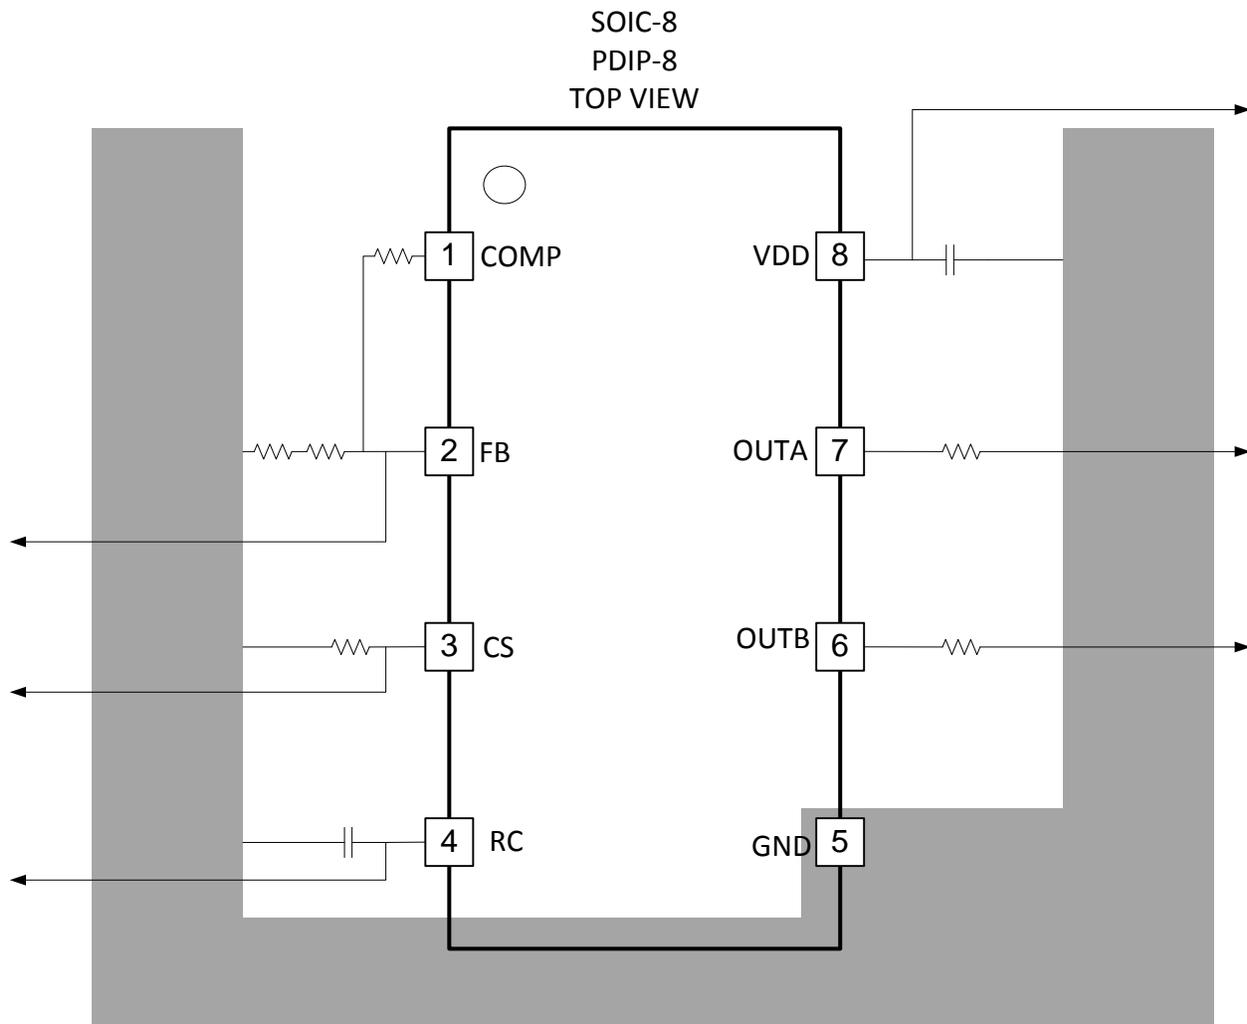

The recommended decoupling capacitors are a 0.1- $\mu$ F 0603-sized 25-V X7R capacitor.

## 10 Layout

### 10.1 Layout Guidelines

1. Locate the VDD capacitor as close as possible between the VDD terminal and GND of the UCCx808-x, tracked directly to both terminals.
2. A small, external filter capacitor is recommended on the CS terminal. Track the filter capacitor as directly as possible from the CS to GND terminal.
3. The tracking and layout of the FB terminal and connecting components is critical to minimizing noise pick-up and interference in the magnetic sensing block. Reduce the total surface area of trances on the FB net to a minimum.
4. The OUTA/OUTB terminal has high internal sink/source current capability. An external gate resistor is recommended. The value depends on the choice of power MOSFET, efficiency and EMI considerations. A pulldown resistor on the gate of the external MOSFET is recommended to prevent the MOSFET gate from floating on if there is an open-circuit error in the gate drive path.

### 10.2 Layout Example

**Figure 9. Layout Example**

UCC3808N-2G4	ACTIVE	PDIP	P	8	50	Green (RoHS & no Sb/Br)	CU NIPDAU	N / A for Pkg Type	0 to 70	UCC3808N-2	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF UCC3808-2 :**

- Military: [UCC1808-2](#)

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

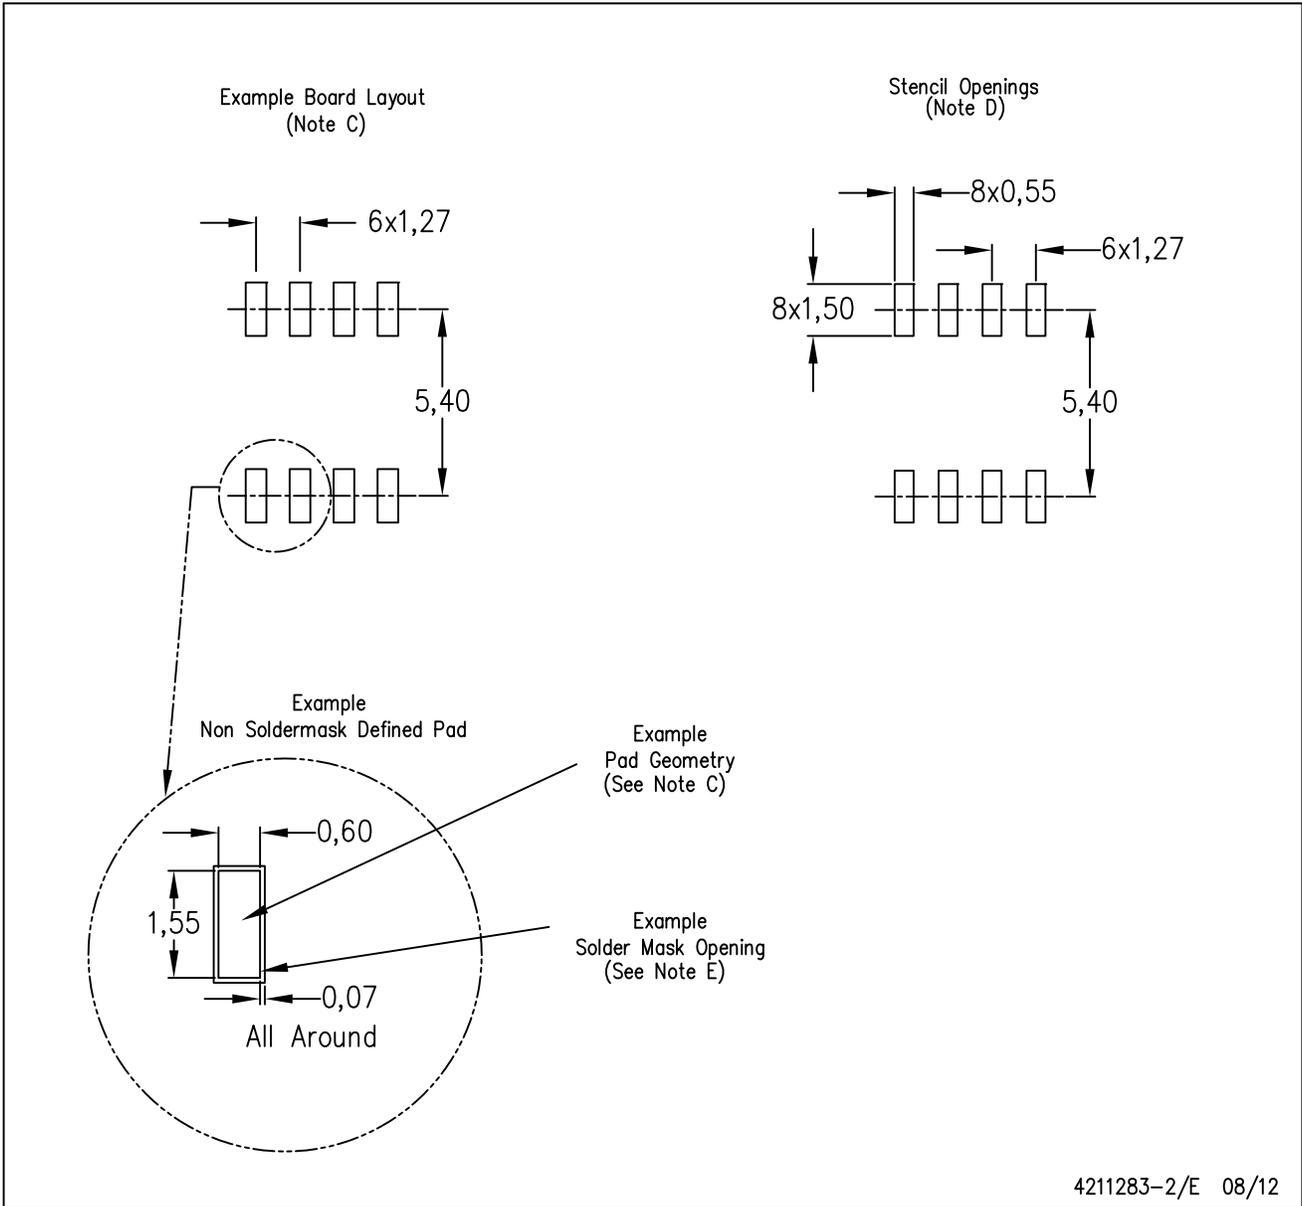

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Falls within JEDEC MS-001 variation BA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
