

## N-Channel Enhancement-Mode Vertical DMOS FETs

### Features

- ▶ Free from secondary breakdown
- ▶ Low power drive requirement
- ▶ Ease of paralleling
- ▶ Low  $C_{iss}$  and fast switching speeds
- ▶ Excellent thermal stability
- ▶ Integral SOURCE-DRAIN diode
- ▶ High input impedance and high gain
- ▶ Complementary N- and P-Channel devices

### Applications

- ▶ Motor controls
- ▶ Converters
- ▶ Amplifiers
- ▶ Switches
- ▶ Power supply circuits
- ▶ Drivers (relays, hammers, solenoids, lamps, memories, displays, bipolar transistors, etc.)

### Ordering Information

| Device     | Package | $BV_{DSS}/BV_{DGS}$<br>(V) | $R_{DS(ON)}$<br>(max)<br>( $\Omega$ ) | $I_{D(ON)}$<br>(min)<br>(mA) |
|------------|---------|----------------------------|---------------------------------------|------------------------------|
| VN0550N3   | TO-92   | 500                        | 60                                    | 150                          |
| VN0550N3-G |         |                            |                                       |                              |

-G indicates package is RoHS compliant ('Green')

### Absolute Maximum Ratings

| Parameter                          | Value           |
|------------------------------------|-----------------|
| Drain to source voltage            | $BV_{DSS}$      |
| Drain to gate voltage              | $BV_{DGS}$      |
| Gate to source voltage             | $\pm 20V$       |
| Operating and storage temperature  | -55°C to +150°C |
| Soldering temperature <sup>1</sup> | +300°C          |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

**Notes:**

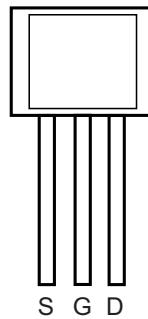

1. Distance of 1.6mm from case for 10 seconds.

### General Description

The Supertex VN0550 is an enhancement-mode (normally-off) transistor that utilizes a vertical DMOS structure and Supertex's well-proven silicon-gate manufacturing process. This combination produces a device with the power handling capabilities of bipolar transistors, and the high input impedance and positive temperature coefficient inherent in MOS devices. Characteristic of all MOS structures, this device is free from thermal runaway and thermally-induced secondary breakdown.

Supertex's vertical DMOS FETs are ideally suited to a wide range of switching and amplifying applications where very low threshold voltage, high breakdown voltage, high input impedance, low input capacitance, and fast switching speeds are desired.

### Pin Configuration

### Notes:

1. All D.C. parameters 100% tested at  $25^\circ\text{C}$  unless otherwise stated. (Pulse test:  $300\mu\text{s}$  pulse, 2% duty cycle.)
2. All A.C. parameters sample tested.

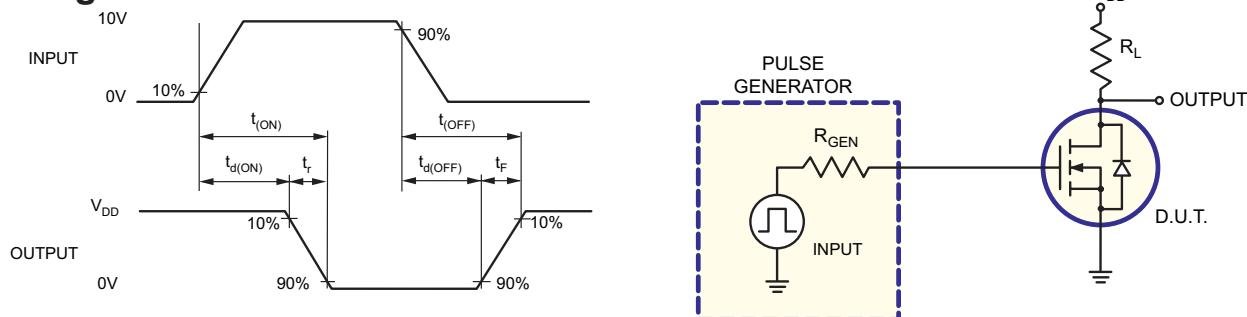

## Thermal Characteristics

| Device | Package | $I_D$ (continuous)* (mA) | $I_D$ (pulsed) (mA) | Power Dissipation @ $T_c = 25^\circ\text{C}$ (W) | $\theta_{\text{JC}}$ ( $^\circ\text{C/W}$ ) | $\theta_{\text{JA}}$ ( $^\circ\text{C/W}$ ) | $I_{\text{DR}}^*$ (mA) | $I_{\text{DRM}}$ (mA) |
|--------|---------|--------------------------|---------------------|--|---|---|------------------------|-----------------------|
| VN0550 | TO-92   | 50                       | 250                 | 1.0  | 125   | 170   | 50                     | 250                   |

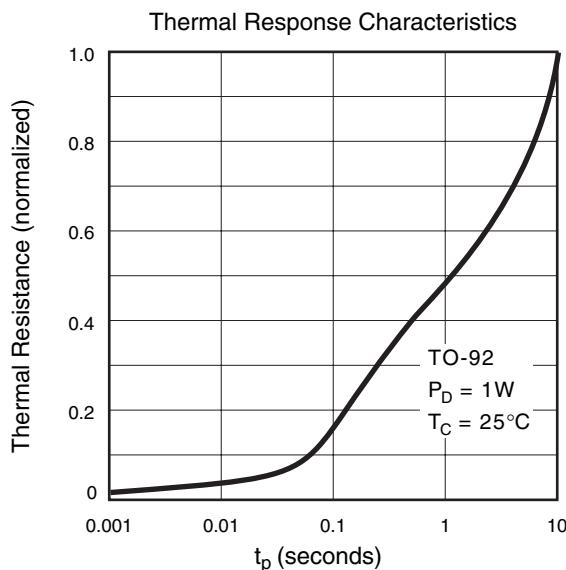

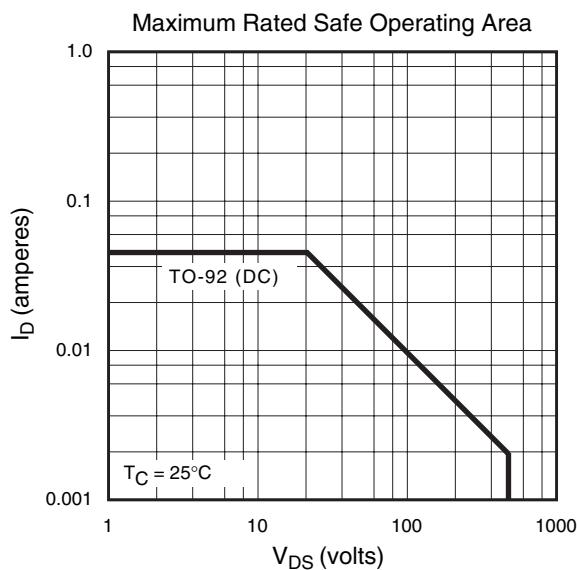

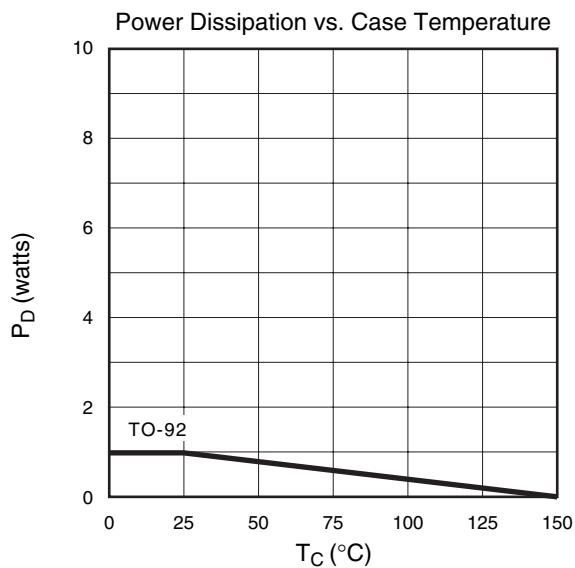

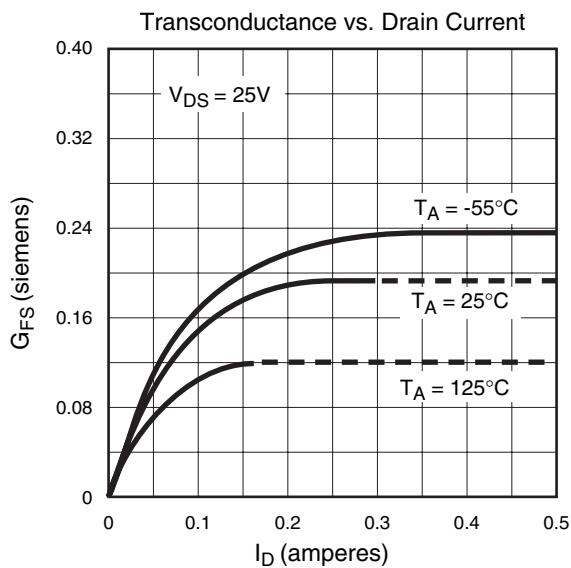

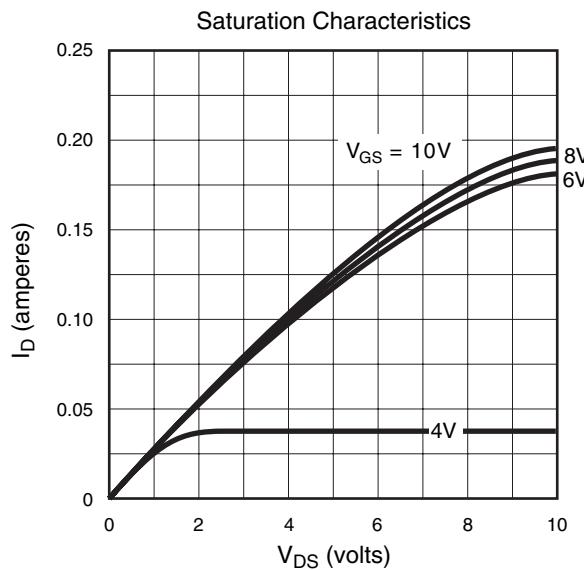

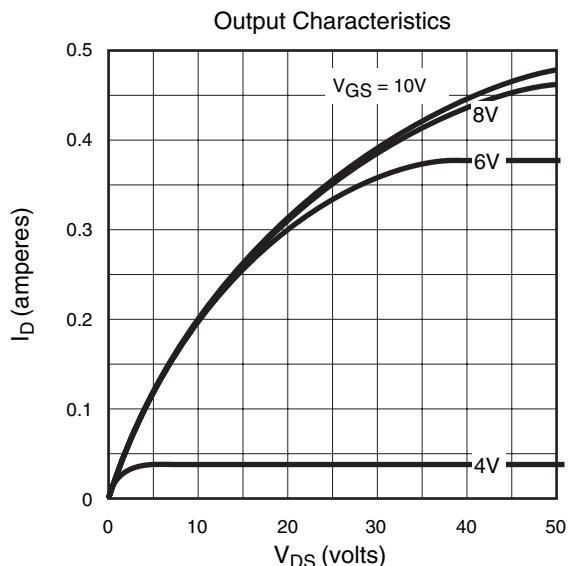

### Notes:

\*  $I_D$  (continuous) is limited by max rated  $T_J$ .
