

## Features

Type	$R_{DS(on)}$	$I_{OUT}$	$V_{CC}$
VN820			
VN820SP	40 mΩ		
VN820-B5			
VN820PT			

- Very low standby current
- CMOS compatible input
- On-state open-load detection
- Off-state open-load detection
- Thermal shutdown protection and diagnosis
- Undervoltage shutdown
- Overvoltage clamp
- Output stuck to  $V_{CC}$  detection
- Load current limitation
- Reverse battery protection
- Electrostatic discharge protection

## Description

The VN820 is a monolithic device designed in STMicroelectronic's VIPower® M0-3 technology. The VN820 is intended for driving any type of load with one side connected to ground. The active  $V_{CC}$  pin voltage clamp protects the device against low energy spikes.

Active current limitation combined with thermal shutdown and automatic restart protects the device against over-load. The device detects the open-load condition in both the on-state and off-state. In the off-state the device detects if the output is shorted to  $V_{CC}$ . The device automatically turns off in the case where the ground pin becomes disconnected.

## 2 Electrical specifications

**Figure 3. Current and voltage conventions**

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in the [Table 3](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to Absolute maximum rating conditions for extended periods may affect device reliability.

**Table 3. Absolute maximum ratings**

Symbol	Parameter	Value				Unit
		PowerSO-10	PENTAWATT	P <sup>2</sup> PAK	PPAK	
$V_{CC}$	DC supply voltage	41				V
$-V_{CC}$	Reverse DC supply voltage		- 0.3			V
$-I_{gnd}$	DC reverse ground pin current		- 200			mA
$I_{OUT}$	DC output current	Internally limited				A
$-I_{OUT}$	Reverse DC output current	- 9				A
$I_{IN}$	DC input current	+/- 10				mA
$I_{STAT}$	DC Status current	+/- 10				mA

$T_R$	Reset temperature		135			$^\circ\text{C}$
$T_{hyst}$	Thermal hysteresis		7	15		$^\circ\text{C}$
$t_{SDL}$	Status delay in over-load condition	$T_j > T_{jsh}$			20	ms
$I_{lim}$	Current limitation	$9 \text{ V} < V_{CC} < 36 \text{ V}$	9	13	20	A
		$5.5 \text{ V} < V_{CC} < 36 \text{ V}$			20	A
$V_{demag}$	Turn-off output clamp voltage	$I_{OUT} = 3 \text{ A}; V_{IN} = 0 \text{ V}; L = 6 \text{ mH}$	$V_{CC} - 41$	$V_{CC} - 48$	$V_{CC} - 55$	V

1. To ensure long term reliability under heavy over-load or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device operates under abnormal conditions this software must limit the duration and number of activation cycles.

### 3 Application information

**Figure 24. Application schematic**

#### 3.1 GND protection network against reverse battery

##### 3.1.1 Solution 1: resistor in the ground line ( $R_{GND}$ only)

This can be used with any type of load.

The following is an indication on how to size the  $R_{GND}$  resistor.

1.  $R_{GND} \leq 600 \text{ mV} / (I_{S(on)\max})$
2.  $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where  $-I_{GND}$  is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power Dissipation in  $R_{GND}$  (when  $V_{CC} < 0$ : during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where  $I_{S(on)\max}$  becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground then the  $R_{GND}$  will produce a shift ( $I_{S(on)\max} * R_{GND}$ ) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high-side drivers sharing the same  $R_{GND}$ .

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor then ST suggests to utilize Solution 2 (see below).

### 3.1.2 Solution 2: diode ( $D_{GND}$ ) in the ground line

A resistor ( $R_{GND} = 1 \text{ k}\Omega$ ) should be inserted in parallel to  $D_{GND}$  if the device drives an inductive load.

This small signal diode can be safely shared amongst several different HSDs. Also in this case, the presence of the ground network produces a shift ( $\approx 600 \text{ mV}$ ) in the input threshold and in the status output values if the microprocessor ground is not common to the device ground. This shift does not vary if more than one HSD shares the same diode/resistor network.

Series resistor in INPUT and STATUS lines are also required to prevent that, during battery voltage transient, the current exceeds the absolute maximum rating.

Safest configuration for unused INPUT and STATUS pin is to leave them unconnected.

## 3.2 Load dump protection

$D_{ld}$  is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds the  $V_{CC}$  max DC rating. The same applies if the device is subject to transients on the  $V_{CC}$  line that are greater than the ones shown in the ISO 7637-2: 2004(E) table.

## 3.3 MCU I/Os protection

If a ground protection network is used and negative transient are present on the  $V_{CC}$  line, the control pins are pulled negative. ST suggests to insert a resistor ( $R_{prot}$ ) in line to prevent the microcontroller I/O pins from latching-up.

The value of these resistors is a compromise between the leakage current of microcontroller and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit of microcontroller I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

For  $V_{CCpeak} = -100\text{V}$  and  $I_{latchup} \geq 20\text{mA}$ ;  $V_{OH\mu C} \geq 4.5\text{V}$

$$5\text{k}\Omega \leq R_{prot} \leq 65\text{k}\Omega$$

Recommended values:  $R_{prot} = 10\text{k}\Omega$ .

## 3.4 Open load detection in off-state

Off-state open load detection requires an external pull-up resistor ( $R_{PU}$ ) connected between OUTPUT pin and a positive supply voltage ( $V_{PU}$ ) like the +5V line used to supply the microprocessor.

The external resistor has to be selected according to the following requirements:

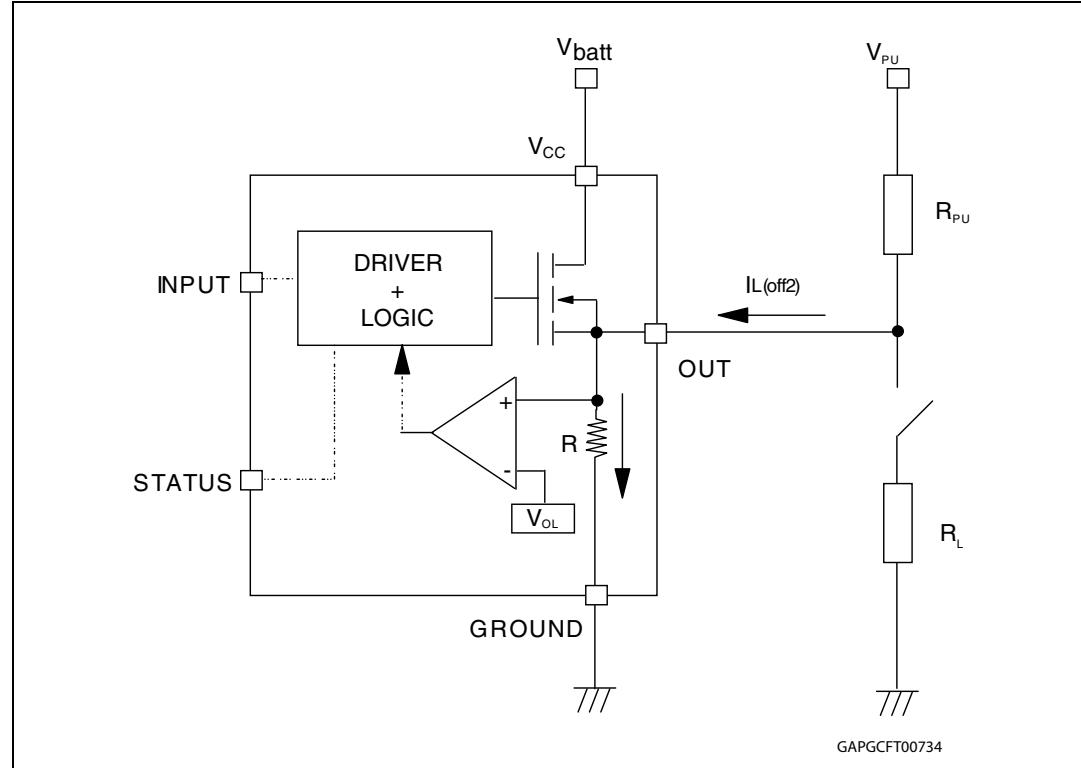

1. no false open load indication when load is connected: in this case we have to avoid  $V_{OUT}$  to be higher than  $V_{OLmin}$ ; this results in the following condition  

$$V_{OUT} = (V_{PU} / (R_L + R_{PU})) R_L < V_{OLmin}$$
2. no misdetection when load is disconnected: in this case the  $V_{OUT}$  has to be higher than  $V_{OLmax}$ ; this results in the following condition  $R_{PU} < (V_{PU} - V_{OLmax}) / I_{L(off2)}$ .

Because  $I_{S(OFF)}$  may significantly increase if  $V_{out}$  is pulled high (up to several mA), the pull-up resistor  $R_{PU}$  should be connected to a supply that is switched off when the module is in standby.

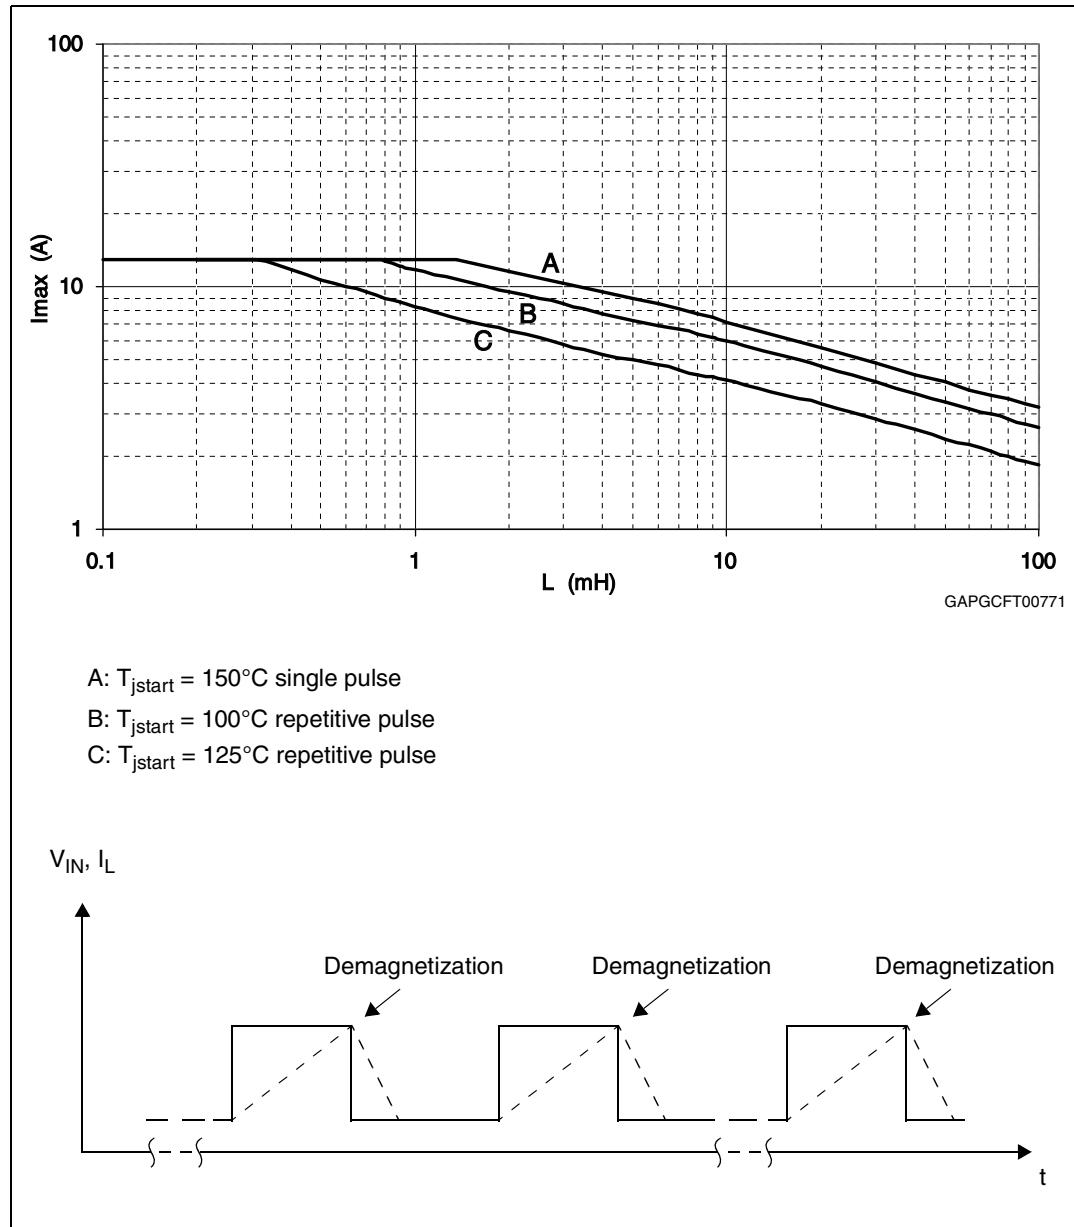

The values of  $V_{OLmin}$ ,  $V_{OLmax}$  and  $I_{L(off2)}$  are available in the electrical characteristics section.

**Figure 25. Open load detection in off-state**

### 3.5 PowerSO-10, P<sup>2</sup>PAK, PPAK, PENTAWATT maximum demagnetization energy ( $V_{CC} = 13.5V$ )

**Figure 26. PowerSO-10, P<sup>2</sup>PAK, PPAK, PENTAWATT maximum turn-off current versus inductance**

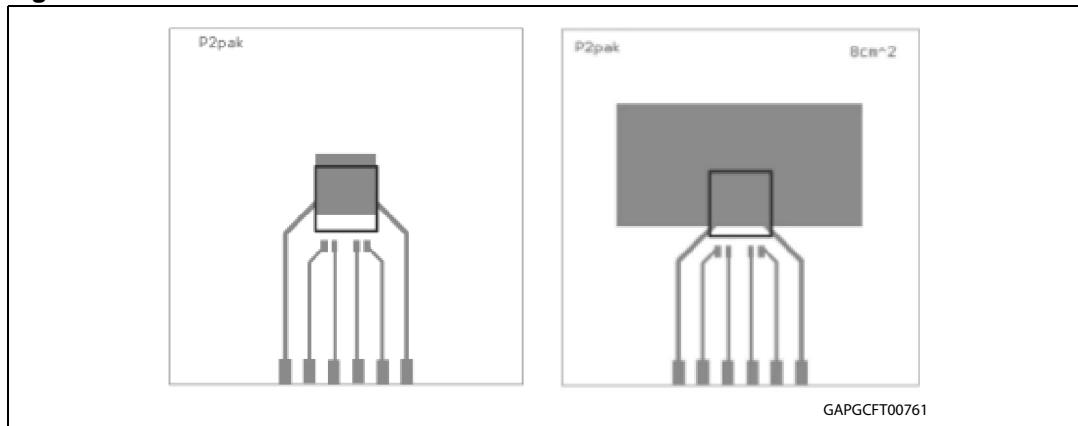

Note:

Values are generated with  $R_L = 0 \Omega$ . In case of repetitive pulses,  $T_{jstart}$  (at the beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

## 4 Package and PCB thermal data

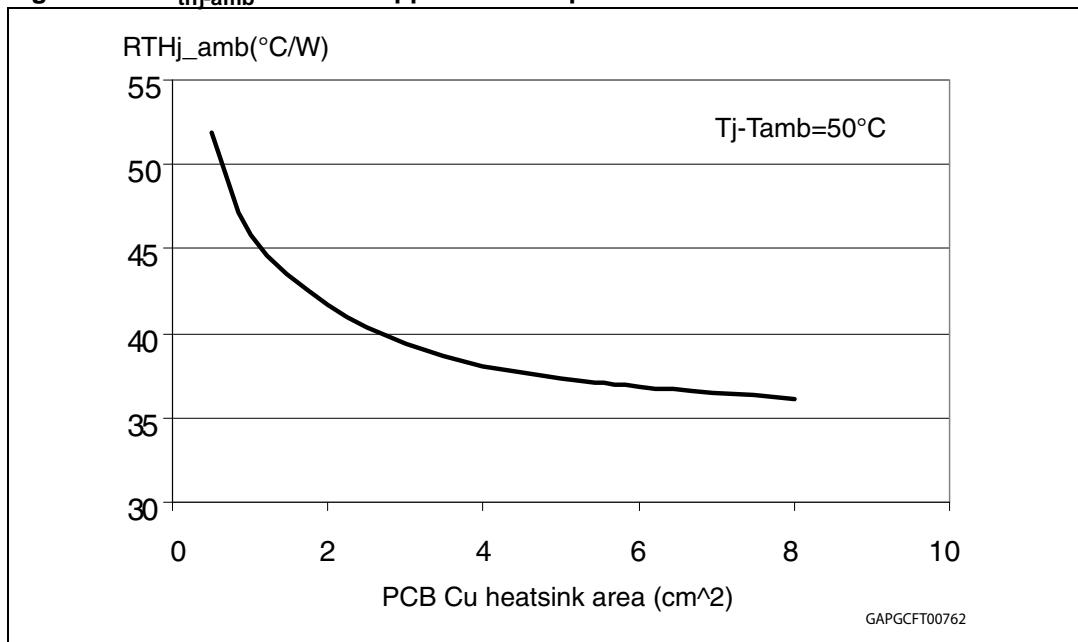

### 4.1 P<sup>2</sup>PAK thermal data

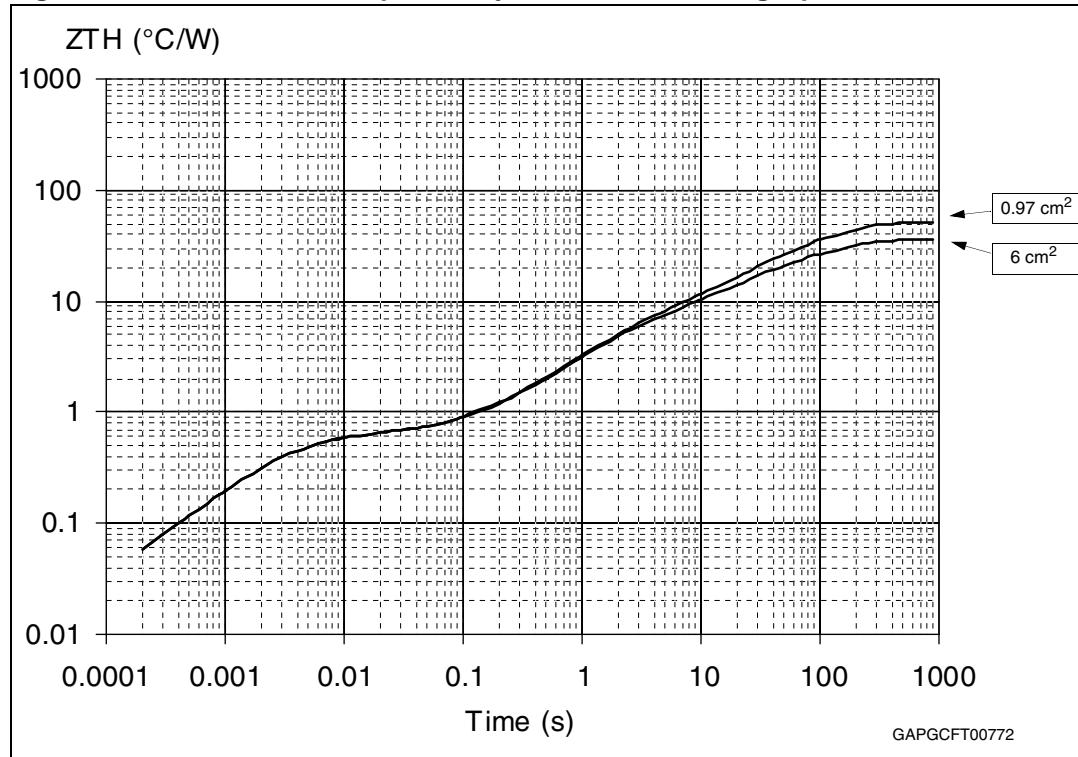

Figure 27. PC board

Note: Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB FR4 area = 60 mm x 60 mm, PCB thickness = 2 mm, Cu thickness = 35  $\mu$ m, Copper areas: 0.97  $cm^2$ , 8  $cm^2$ ).

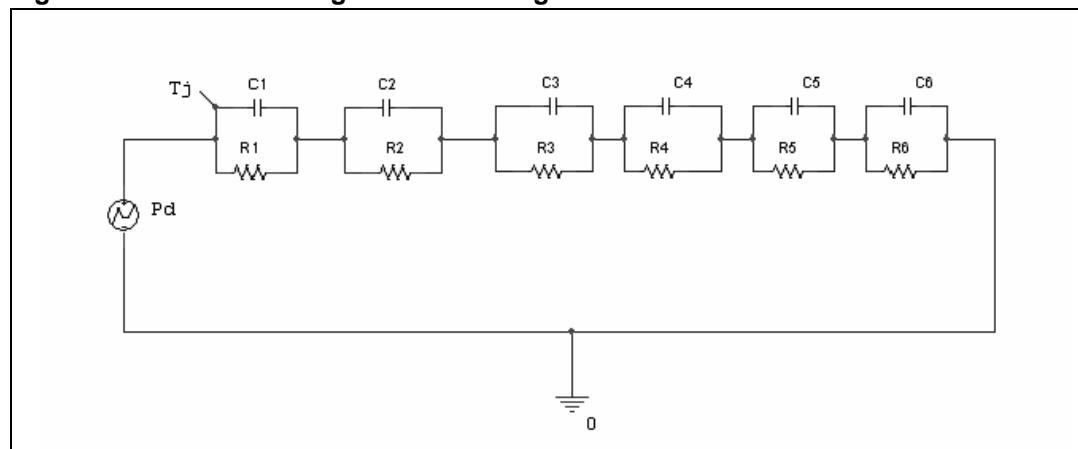

Figure 28.  $R_{thj\_amb}$  vs PCB copper area in open box free air condition

**Figure 29. P<sup>2</sup>PAK thermal impedance junction ambient single pulse****Equation 1: pulse calculation formula**

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

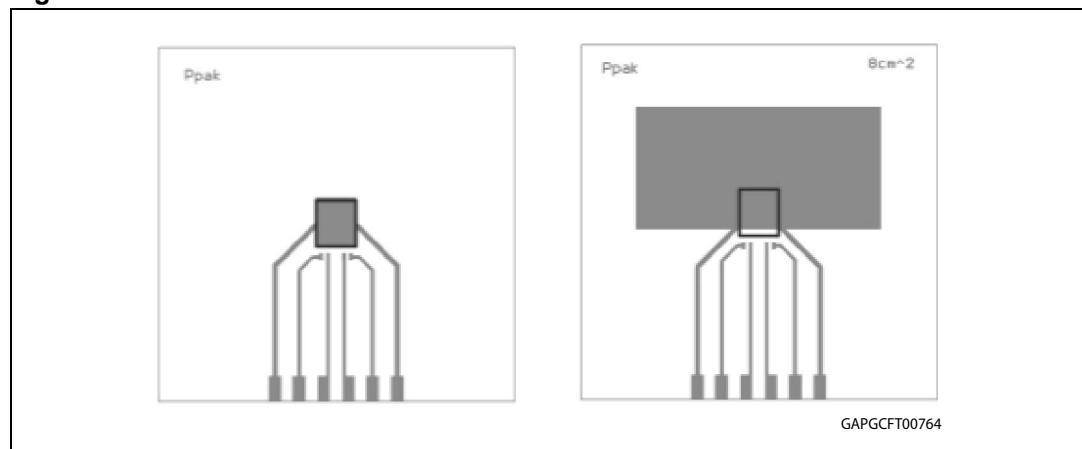

where  $\delta = t_p/T$

**Figure 30. Thermal fitting model of a single channel**

**Table 14. Thermal parameter**

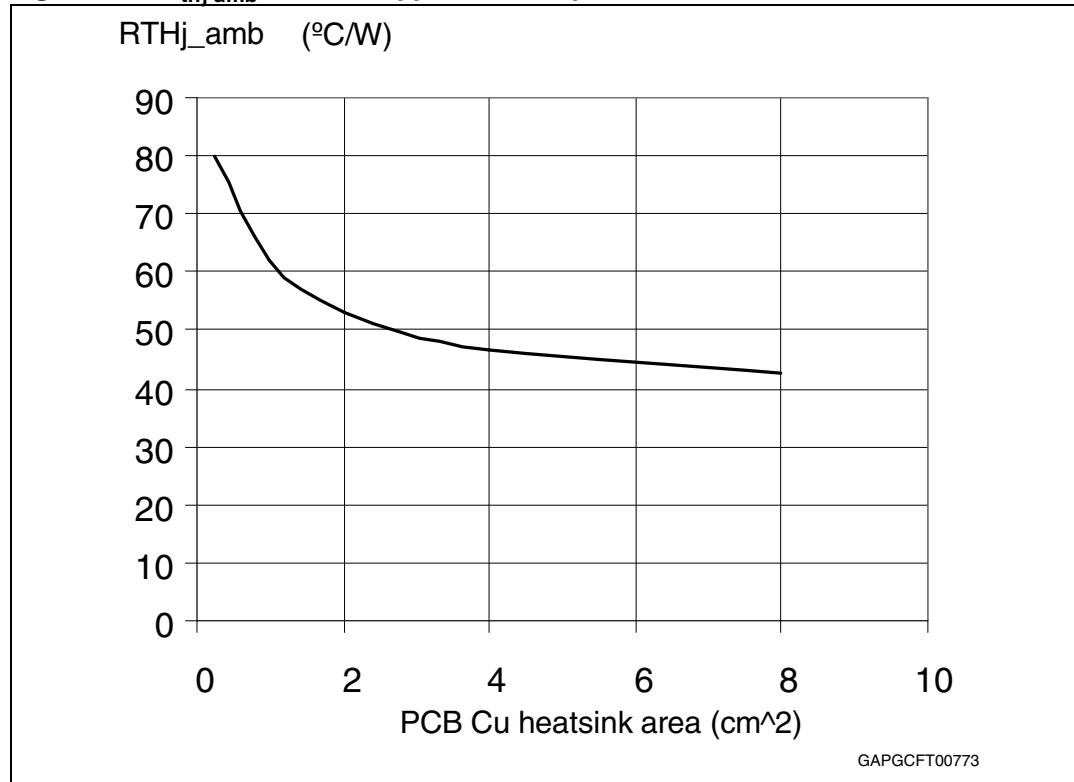

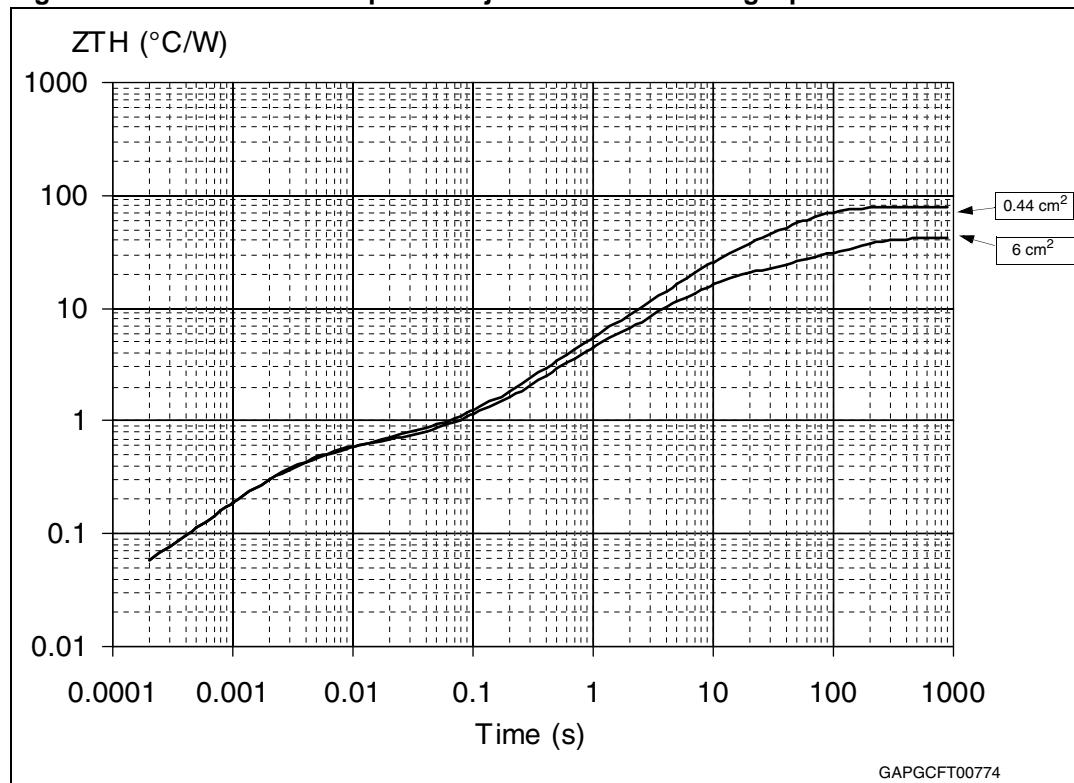

<b>Area/island (cm<sup>2</sup>)</b>	<b>0.97</b>	<b>6</b>
R1 (°C/W)	0.04	
R2 (°C/W)	0.25	
R3 (°C/W)	0.3	
R4 (°C/W)	4	
R5 (°C/W)	9	
R6 (°C/W)	37	22

C5 (W.s/°C)	0.75	
C6 (W.s/°C)	3	5

## 5 Package and packing information

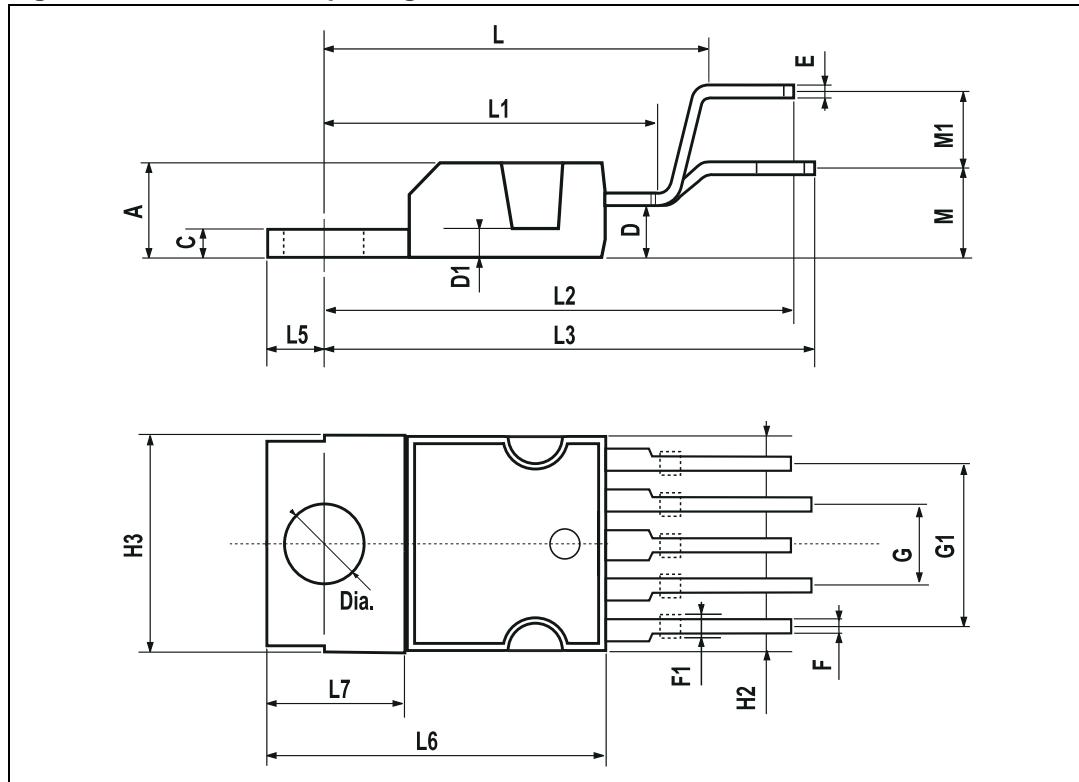

### 5.1 ECOPACK®

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK® is an ST trademark.

### 5.2 PENTAWATT mechanical data

## 6 Revision history

**Table 21. Document revision history**

Date	Revision	Changes
07-Jul-2004	1	Initial release.
03-May-2006	2	Minor changes Current and voltage convention update (page 2). Configuration diagram (top view) and suggested connections for unused and n.c. pins insertion (page 2). 6 cm <sup>2</sup> Cu condition insertion in thermal data table (page 3). $V_{CC}$ - output diode section update (page 4). Revision history table insertion (page 34). Disclaimers update (page 35).
17-Dec-2008	3	Document reformatted and restructured. Added content, list of figures and tables. Added <i>ECOPACK® packages</i> information. Updated <i>Figure 45.: P<sup>2</sup>PAK tape and reel (suffix "13TR")</i> : – changed component spacing (P) in tape dimensions table from 16 mm to 12 mm.
31-Mar-2010	4	Updated document template. Updated features list. Removed SO-16L package into the document: – Updated <i>Table 1: Device summary</i> – Updated <i>Table 3: Absolute maximum ratings</i> – Updated <i>Table 4: Thermal data</i> – Updated <i>Section 3.5: PowerSO-10, P<sup>2</sup>PAK, PPAK, PENTAWATT maximum demagnetization energy (VCC = 13.5V)</i> – Updated <i>Section 4: Package and PCB thermal data</i> – Updated <i>Section 5: Package and packing information</i>
06-Jun-2012	5	Updated <i>Section 5.8: PPAK packing information</i>

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**UNLESS EXPRESSLY APPROVED IN WRITING BY TWO AUTHORIZED ST REPRESENTATIVES, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
