
General Purpose, Low Noise NPN Silicon Bipolar Transistor

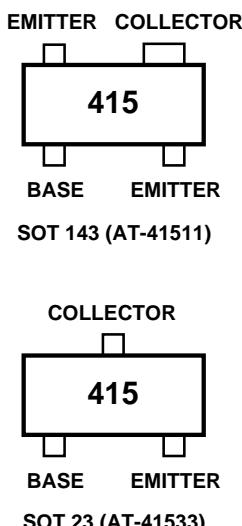

Technical Data

AT-41511
AT-41533

Features

- General Purpose NPN Bipolar Transistor
- 900 MHz Performance:
AT-41511: 1 dB NF, 15.5 dB G_A
AT-41533: 1 dB NF, 14.5 dB G_A
- Characterized for 3, 5, and 8 Volt Use
- SOT-23 and SOT-143 SMT Plastic Packages
- Tape-and-Reel Packaging Option Available^[1]

Outline Drawing

Description

Hewlett-Packard's AT-41511 and AT-41533 are general purpose NPN bipolar transistors that offer excellent high frequency performance at an economical price. The AT-41533 uses the 3 lead SOT-23, while the AT-41511 places the same die in the lower parasitic 4 lead SOT-143. Both packages are industry standard, and compatible with high volume surface mount assembly techniques.

The 4 micron emitter-to-emitter pitch of these transistors yields high performance products that can perform a multiplicity of tasks. The 14 emitter finger interdigitated geometry yields an intermediate-sized transistor with easy to match to impedances, low noise figure, and moderate power.

Optimized for best performance from a 5 to 8 volt bias supply, these transistors are also good

performers at 2.7 V. Applications include use in wireless systems as an LNA, gain stage, buffer, oscillator, or active mixer.

An optimum noise match near 50 ohms at 900 MHz makes these devices particularly easy to use as LNAs. Typical amplifier designs at 900 MHz yield 1 dB noise figures with 15 dB or more associated gain at a 5 V, 5 mA bias, with good gain and noise figure obtainable at biases as low as 2 mA.

The AT-415 series bipolar transistors are fabricated using Hewlett-Packard's 10 GHz f_T Self-Aligned-Transistor (SAT) process. The die are nitride passivated for surface protection. Excellent device uniformity, performance and reliability are produced by the use of ion-implantation, self-alignment techniques, and gold metalization in the fabrication of these devices.
