

# TDA7479

## Single chip RDS demodulator + filter

### Features

- Very high RDS demodulation quality with improved digital signal processing
- High performance, 57 kHz bandpass filter (8<sup>th</sup> order)
- Filter adjustment free and without external components
- Purely digitaL RDS Demodulation without external components
- ARI (SK indication) and RDS signal quality output
- 4.332 MHz crystal oscillator (8.664 and 17.328 MHz optional)
- Low noise CMOS technology
- Low radiation

### Description

The TDA7479 recovers the additional inaudible RDS information which is transmitted by FM radio broadcasting stations and operates in accordance with the EBU (European Broadcasting Union) specifications.

#### Table 1. Device summary

The device is made up of two sections: a cascaded antialiasing + switched capacitors 8<sup>th</sup> bandpass filter for precise RDS band selection and a demodulating section that performs the extraction od RDS data stream (RDDA) and clock (RDCL), to be further processed by a suitable RDS decoder.

Outputs for RDS signal quality and ARI indication are also present.

1. The 3<sup>rd</sup> harmonic (57 kHz) must be less than -40 dB with respect to the input signal plus gain.

## 3 Output timing

The RDS (1187.5Hz) output clock on RDCL line is synchronized to the incoming data. According to the internal PLL lock condition data change can result on the falling or on the rising clock edge (see *Figure 3*). Whichever clock edge is used by the decoder (rising or falling edge) the data will remain valid for 416.7  $\mu$ s after the clock transition.

## 4 Oscillator controls (FSEL, OSEL)

Three different crystal frequencies can be used. The adoption of the internal clock divider to the external crystal is achieved via the input pin FSEL. See the following table for reference:

Table 6. Crystal frequencies

Crystal	FSEL (pin configuration)
4.332MHz	
8.664MHz	connected to GND or open connected to Vs external resistor of 100K to Vs
17.328MHz	

A special mode is introduced to reduce EMI. With pin OSEL connected to GND the internal oscillator is switched off and an external sinusoidal frequency could be applied on OSCIN. The peak to peak voltage of this signal can be reduced down to 60mV.

In this mode the frequency selection via FSEL is still active.

Suggested values of C1 and C2 are shown in the following table:

#### Table 7. C1 and C2 value

Crystal	C1	C2
4.332MHz	27pF	47pF
8.664MHz	27pF	-
17.328MHz	27pF	-

### 5 Package information

In order to meet environmental requirements, ST (also) offers these devices in ECOPACK<sup>®</sup> packages. ECOPACK<sup>®</sup> packages are lead-free. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label.

ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
