

MAX20754 Evaluation Kit

Evaluates: MAX20754 and MAX20766

General Description

This evaluation kit demonstrates the MAX20754 PMBus™ compatible, dual-output, multiphase power-supply controller. The controller generates six pulse-width modulated (PWM) control signals, or “phases.” The MAX20754 evaluation kit (EV kit) is a two-output design, with four phases assigned to output 1 and the remaining two phases assigned to output 2. Both outputs use coupled inductor topologies. Coupled inductors reduce the effective inductor value and size without excessive ripple current, reducing required output capacitance, and improving transient response.

The EV kit also demonstrates the MAX20766 power-stage device. There are six MAX20766 devices, one per phase.

Features

- Optimized for Single +10V to +16V Supply
 - Onboard +3.3V Regulator (MAX17501)
- Generates Two Independent Outputs
 - Output 1: 4-Phase, 1V, 100A
 - Output 2: 2-Phase, 1V, 50A
- 500kHz Switching Frequency
- Independent Enable Switches
- PMBus Configuration and Control
 - Compatible with Maxim's PowerTool™ GUI
 - Easy Connection to PC Using MAXPOWERTOOL002# (order separately)
- Status LEDs
 - Power-Good
 - Power-Stage Fault
 - SMBus Alert
- Proven PCB Layout
- Compensation Scheme Optimized for High Bandwidth
- Fully Tested and Assembled

Quick Start

Required Equipment

- 12V DC power supply capable of delivering 250W at the desired input voltage
- Windows PC with a spare USB port
- MAXPOWERTOOL002# USB to SMBus Interface (order separately)
- Maxim Digital PowerTool GUI software

Optional Equipment

- AC/DC “wall adapter” for convenient low-power evaluation, connecting to J5 on the EV kit. For example:
 - CUI p/n ETSA120500UC-P5P-SZ (12V, 5A, 60W max)
 - CUI p/n EMSA120300-P5P-SZ (12V, 3A, 40W max)
- 300MHz four-channel oscilloscope
- BNC-to-SMB cables for convenient, low-noise oscilloscope connection to the input and output voltage sense points. For example: CD International Technology p/n BSB-174TPR-3.
- Electronic load capable of sinking 100A at 1V
 - Two loads are required to test both outputs simultaneously
 - Ask about the Maxim MINILOAD device
- Digital multimeter (DMM)

[Ordering Information](#) appears at end of data sheet.

MAX20754 Evaluation Kit

Evaluates: MAX20754 and MAX20766

Procedure

Note: In the following sections, text in **bold** refers to items directly from the EV kit software.

The EV kit is fully assembled and tested. Follow the steps below to verify board operation. Caution: Do not turn on the power supply until all connections are completed.

- 1) Visit [www.the Maxim Integrated website](http://www.maximintegrated.com) to download and install the latest version of the Digital PowerTool Software.
- 2) Connect the USB cable from the PC to the MAX-POWERTOOL002# interface adapter.
- 3) Connect the adapter ribbon cable to the matching header J13 on the EV kit, ensuring that J13-Pin 1 is adjacent to the red wire on the ribbon cable.
- 4) Connect the DC power supply positive lead to J6 and the negative lead to J7 (or use an AC-DC adapter through J5 using a center-positive 2.1mm I.D. x 5.5mm O.D. plug).
- 5) If available, connect the electronic load(s) to the outputs at screw terminals ST1, ST2, ST3, and ST4,

being careful to observe the VOUT and GND polarity indicated by the silkscreen labels.

- 6) If available, connect the oscilloscope to the EV kit for waveform analysis. Coaxial SMB cable connections J8, J9, and J10 allow low-noise measurement of the input and output ripple waveforms. (Note that the input voltage signal at J8 is resistively attenuated 20:1 to protect oscilloscope inputs.)
- 7) Ensure that jumpers JP1 and JP2 have shunts installed.
- 8) Enable the external 12V supply.
- 9) Enable the onboard MAX17501 12V-to-3.3V supply circuit with switch S5. This supplies 3.3V to the MAX20754, which in turn generates 1.8V power for the MAX20766 power stage devices.
- 10) Start the GUI software. The “Dashboard” window should appear, as shown in [Figure 1](#).
- 11) Enable the MAX20754 outputs by operating switches S2 and S3 on the EV kit, or by setting the OPERATION and ON_OFF_CONFIG commands in the PowerTool GUI.

Figure 1. Maxim PowerTool Graphical User Interface Software Dashboard Window

MAX20754 Evaluation Kit

Detailed Description of Software

The PowerTool software presents system-level information on the **Dashboard** tab. This view collects basic information for all Maxim PMBus devices found on the bus. This tab configures sequencing and output voltage levels, and presents an overview of the system status. Clicking the **Stop Communication** button stops all PMBus transactions from the PowerTool GUI. To force detection of all active devices on the bus, click the **Search for Devices** button.

For detailed information on a particular device, click on the sub-tab for that device's slave address. This opens a view with a set of further sub-tabs specific to that device as shown in [Figure 2](#). The sub-tabs available vary depending on the GUI version and the connected device's capability, but typically include **Configuration**, **Monitor**, **Faults Set**, and **PMBus Command**.

The **Configuration** tab presents the most commonly used PMBus command data in human-readable form. The device status is updated by continuous polling of these commands. Configuration settings for an individual device can be saved to or restored from an external file. PMBus command settings can be saved to or restored from the device's internal nonvolatile memory as well.

Evaluates: MAX20754 and MAX20766

The **Monitor** tab shows continuously updated telemetry data from the device. Rolling plots of output voltage, input voltage, output current, and temperature data are shown, including indication of fault limits relative to the operating point.

The **Faults Set** tab allows the user to configure and monitor the status of most protection and warning functions. The fault levels and fault response commands are configured from this tab. The full contents of the STATUS_ register commands are available by clicking the **View Fault/Warning bit by bit** button. Fault and warning flags are cleared by clicking the **Clear Fault/Warning** button, which sends the CLEAR_FAULTS PMBus command to the device.

The **PMBus Command** tab shows all supported PMBus commands in a series of sub-tabs, allowing detailed configuration and analysis of the command values. The user can view the command values in hexadecimal or decimal format by checking or clearing the **Force Hex** checkbox. The **Use PEC** checkbox enables or disables Packet Error Checking for all GUI communications. Note that the command data is continuously updated by polling; typing a new value into the text boxes causes the new value to be sent to the device.

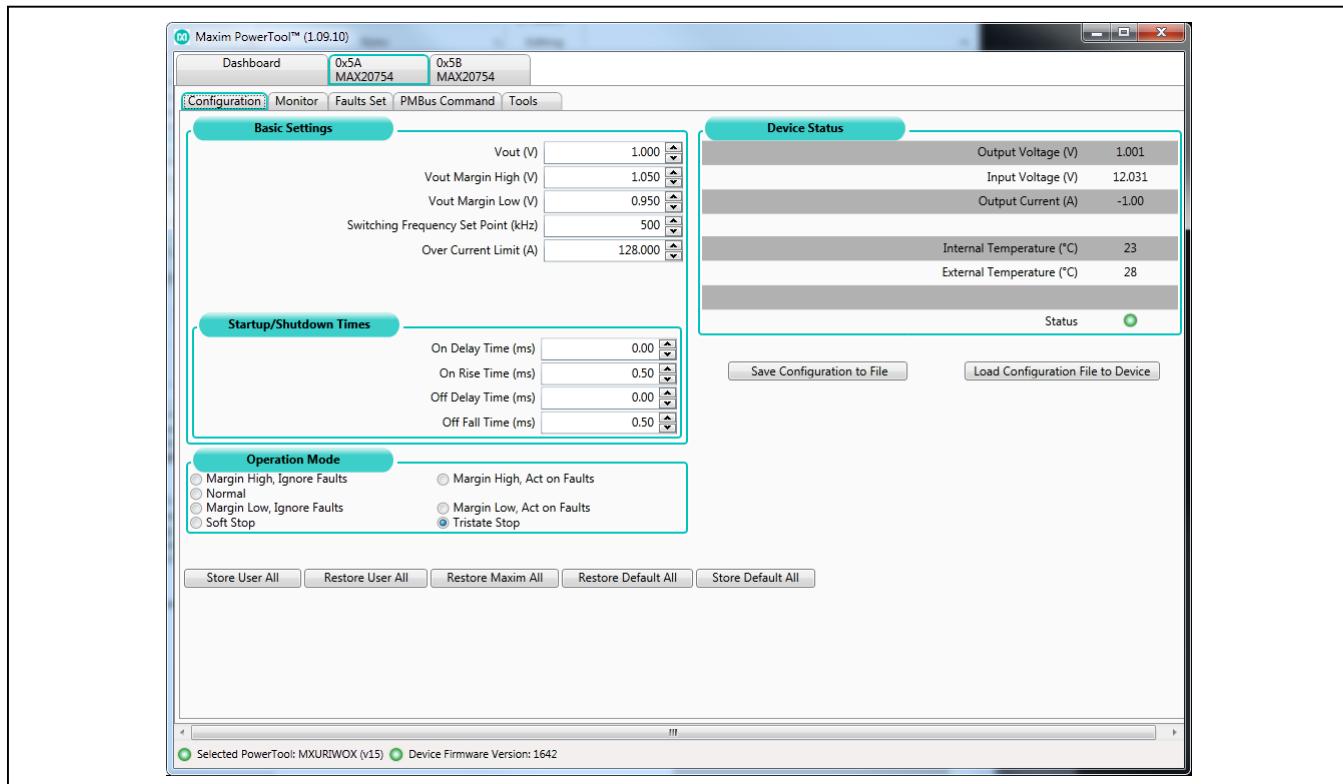

Figure 2. Detailed View for One Device; **Configuration** Sub-Tab

MAX20754 Evaluation Kit

Evaluates: MAX20754 and MAX20766

Detailed Description of Hardware

The MAX20754 EV kit demonstrates a dual-output step-down power supply solution, with one four-phase output and one two-phase output, both of which make use of coupled inductors. This solution provides high output-current with high efficiency, fast load-transient response, and low ripple and noise.

The MAX20754 controller automatically interleaves all PWM outputs assigned to a given output at even intervals. The first output is four-phase, resulting in 90° timing; the second output is two-phase, with 180° timing. Each PWM signal is connected to one MAX20766 dual power-stage device, operating in parallel configuration. This configuration is capable of supplying up to 25A per phase. Each power-stage is in turn connected to one winding of a coupled inductor.

Table 1. Jumper JP1

SHUNT POSITION	DESCRIPTION
Installed	MAX17501 +3.3V output connected to MAX20754 V _{DD3P3} input.
Not installed	MAX20754 can be powered by an external +3.3V supply at TP35.

Table 2. Jumper JP2

SHUNT POSITION	DESCRIPTION
Installed	MAX17501 +3.3V output connected to AUX3P3 rail (ENx debounce and status LED logic, etc.).
Not installed	The AUX3P3 rail can be powered by an external +3.3V supply at pin 2 of JP2.

Table 3. Connector List

REFERENCE DESIGNATOR	DESCRIPTION
J6	Input supply positive voltage (+5V to +16V)
J7	Input supply ground
ST1	Rail 1 output positive voltage
ST2	Rail 1 output ground
ST3	Rail 2 output positive voltage
ST4	Rail 2 output ground
J13	Header for connection to MAXPOWERTOOL002# USB to SMBus interface. Pin 1: SCL Pin 3: SDA Pin 7: ALERT Even-numbered pins: Ground
J8	SMB jack for input supply monitoring. This connection has a 1/20 resistive divider with 50Ω back-impedance. Connect to an oscilloscope with 20x scaling and $\geq 1\text{M}\Omega$ input resistance.
J9	SMB jack for rail 1 output voltage monitoring. This connection has 50Ω back-impedance. Connect to an oscilloscope with 1x scaling and $\geq 1\text{M}\Omega$ input resistance.
J10	SMB jack for rail 2 output voltage monitoring. This connection has 50Ω back-impedance. Connect to an oscilloscope with 1x scaling and $\geq 1\text{M}\Omega$ input resistance.
J5	Alternate input supply barrel connector, 2.1mm I.D. x 5.5mm O.D. barrel jack, center-positive. Do not exceed 5A current.

Table 4. Switches

REFERENCE DESIGNATOR	FUNCTION
S5	SPDT toggle switch. Enable MAX17501 +3.3V buck regulator to supply VDD3P3 Green light: output enabled
S4	Momentary tactile switch; no function on MAX20754
S2	SPDT toggle switch. Enable Rail 1 output regulation. Green light: PGOOD1 pin high Amber light: ALERT pin asserted low Red light: FAULT pin asserted low (power stage fault detected)
S3	SPDT toggle switch. Enable Rail 2 output regulation. Green light: PGOOD2 pin high Amber light: ALERT pin asserted low Red light: FAULT pin asserted low (power stage fault detected)

Table 5. Test Points

REFERENCE DESIGNATOR	DESCRIPTION
TP21	ALERT signal (open drain)
TP20	FAULT signal (open drain)
TP36	SDA signal (open-drain)
TP37	SCL signal (open-drain)
TP17	EN1 signal (open drain)
TP38	EN2 signal (open drain)
TP7	Input supply positive voltage
TP8	Input supply ground
TP19	Input voltage sense point for efficiency measurements
TP22	Input ground sense point for efficiency measurements
TP18	PGOOD1 signal (open drain)
TP40	PGOOD2 signal (open drain)
TP6	PWM0 signal (rail 2)
TP5	PWM1 signal (rail 1)
TP4	PWM2 signal (rail 1)
TP3	PWM3 signal (rail 1)
TP2	PWM4 signal (rail 1)
TP1	PWM5 signal (rail 2)
TP13	Rail 1 loop-response (Bode plot) measurement positive injection point (see Schematic)
TP23	Rail 1 loop-response (Bode plot) measurement negative injection point (see Schematic)
TP25	Rail 1 output voltage efficiency measurement point
TP26	Rail 1 output ground efficiency measurement point

Table 5. Test Points (continued)

REFERENCE DESIGNATOR	DESCRIPTION
TP9	Rail 1 output voltage feedback sense point (for line/load regulation accuracy measurement with DMM)
TP10	Rail 1 output ground feedback sense point (for line/load regulation accuracy measurement with DMM)
TP14	Rail 2 loop-response (Bode plot) measurement positive injection point (see Schematic)
TP24	Rail 2 loop-response (Bode plot) measurement negative injection point (see Schematic)
TP27	Rail 2 output voltage efficiency measurement point
TP28	Rail 2 output ground efficiency measurement point
TP11	Rail 2 output voltage feedback sense point (for line/load regulation accuracy measurement with DMM)
TP12	Rail 2 output ground feedback sense point (for line/load regulation accuracy measurement with DMM)
TP34	V_{DDS} supply; +1.8V power to MAX20766 power stage, from MAX20754 integrated switcher output
TP35	V_{DD3P3} supply; +3.3V power to MAX20754 integrated switcher
TP29, TP30, TP31, TP32, TP33, TP39	Ground
