

MIC5282

120V_{IN}, 50mA, Ultra-Low I_Q, High-PSRR
Linear Regulator

General Description

The MIC5282 high-performance linear regulator offers a very-wide input operating voltage range, up to 120V DC, and supplies an output current of up to 50mA.

Ideal for high input voltage applications such as industrial and telecom, the MIC5282 offers $\pm 3\%$ initial accuracy, extremely high-power supply rejection ratio (80dB at 10kHz) and ultra-low quiescent current of 6 μ A. The MIC5282 is optimized for high-voltage line transients, making it ideal for harsh environment applications.

The MIC5282 is offered in both fixed output voltage (3.3V/5.0V) and adjustable output voltage (1.27V to 5.5V) options.

The MIC5282 operates over a -40°C to $+125^{\circ}\text{C}$ temperature range and is available in lead-free, RoHS-compliant, 8-pin ePad MSOP and 8-pin MSOP packages.

Data sheet and support documentation are found on the Micrel website: www.micrel.com.

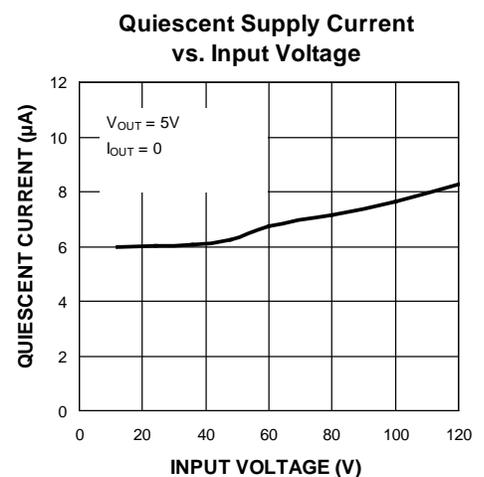

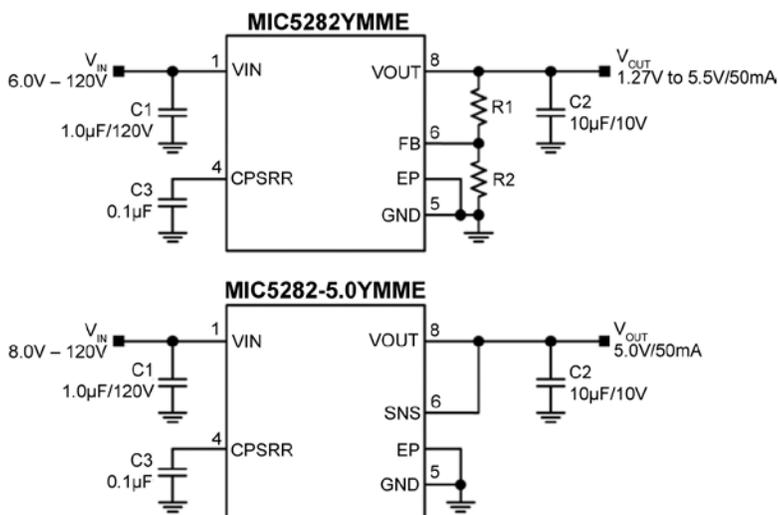

Features

- Wide input voltage range: 6V to 120V DC
- Ultra-low quiescent current: 6 μ A
- 50mA guaranteed output current
- Adjustable output from 1.27V to 5.5V
- Withstands up to +120V DC at the input
- Stable with ceramic capacitors
- Ultra-high PSRR (80dB at 10kHz)
- Ultra-high line rejection (load dump)
- High output accuracy:
 - $\pm 3\%$ initial accuracy
- Thermal-shutdown and current-limit protection
- Thermally-efficient, 8-pin MSOP and 8-pin ePad MSOP packages

Applications

- Industrial
- Remote keyless entry power supply
- Telecom
- Off-line power supplies

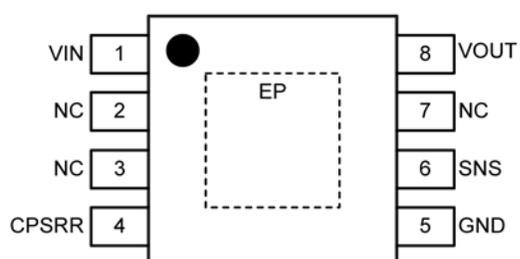

Typical Applications

Pin Description

Pin				Name	Function
MIC5282YMME	MIC5282-x.xYMME	MIC5282YMM	MIC5282-x.xYMM		
1	1	1	1	VIN	Supply Voltage Input. Connect 1 μ F capacitor from VIN to GND.
2, 3, 7	2, 3, 7	2, 3, 7	2, 3, 7	NC	Not internally connected. Connect NC to GND or leave unconnected.
4	4	4	4	CPSRR	Bypass Capacitor Connection. Connect 0.1 μ F capacitor from CPSRR to GND.
5	5	5	5	GND	Ground.
6	–	6	–	FB	Feedback Connection. For external resistor divider to set V _{OUT} .
–	6	–	6	SNS	Sense input. Connect SNS to V _{OUT} .
8	8	8	8	VOUT	Regulator Output. Connect 10 μ F capacitor from V _{OUT} to GND.
EP	EP	–	–	EP	Exposed Pad (ePad) for Thermal Relief. Connect EP to GND.

Absolute Maximum Ratings⁽¹⁾

	1kHz ≤ f ≤ 5kHz		75		dB	
	5kHz ≤ f ≤ 40kHz		80		dB	
	40kHz ≤ f ≤ 1MHz		90		dB	

Electrical Characteristics⁽⁵⁾ (Continued)

$V_{IN} = 12V$, $C_{IN} = 1.0\mu F$, $C_{PSRR} = 0.1\mu F$, $C_{OUT} = 10\mu F$, $V_{OUT} = 5.0V$ or $3.3V$, $I_{OUT} = 100\mu A$, $T_A = 25^\circ C$, **bold** values indicate $-40^\circ C \leq T_J \leq +125^\circ C$, unless noted.

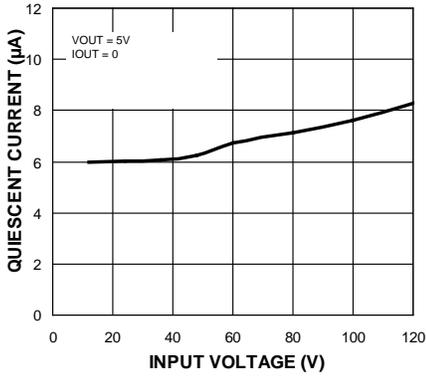

Parameter	Condition	Min.	Typ.	Max.	Units
Power Dropout Voltage					
Dropout Voltage	$I_{OUT} = 50mA$		2	3	V
Thermal Protection					
Thermal-Shutdown Temperature	T_J rising		157		$^\circ C$
Thermal-Shutdown Hysteresis			15		$^\circ C$

Notes:

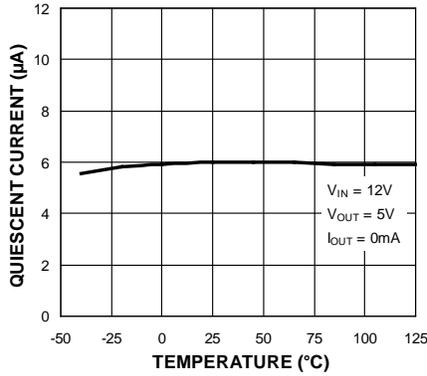

1. Exceeding an absolute maximum rating may damage the device.
2. The device is not guaranteed to function outside its operating rating.
3. The maximum allowable power dissipation at any T_A (ambient temperature) is $P_{D(max)} = (T_{J(max)} - T_A) / \theta_{JA}$. Exceeding the maximum allowable power dissipation results in excessive die temperature, and causes the regulator to enter thermal shutdown.
4. Devices are ESD sensitive; use proper handling precautions.
5. Specifications are for packaged products only.
6. Assure that $V_{IN} \geq (V_{OUT} + 3V)$ and $V_{IN} \geq 6V$.
7. Quiescent current is specified for the adjustable option. The fixed options will add approximately $1\mu A$ due to the internal feedback resistors.
8. Line regulation is a percentage of V_{OUT} .
9. See Typical Characteristics Curve on Pg. 8

Detailed Description

The MIC5282 voltage regulator accepts a 6V to 120V input and has an ultra-low 6 μ A typical quiescent current while offering an excellent line transient response and PSRR. These features make it ideal for harsh, noisy environments. All options of the device offer 50mA of output current. The MIC5282YMM and MIC5282YMME offer an adjustable output voltage from 1.27V to 5.5V. The MIC5282-3.3YMME and MIC5282-3.3YMM offer fixed 3.3V outputs and the MIC5282-5.0YMME and MIC5282-5.0YMM offer fixed 5.0V outputs. The YMME packaged devices feature a heat slug to more effectively remove heat from the die.

Applications Information

Thermal Protection

MIC5282 has internal thermal shutdown to protect it from excessive heating of the die. When the junction temperature exceeds approximately +155°C, the output is disabled and the device begins to cool down. The device turns back on when the junction temperature cools by 15°C. This will result in a cycled output during continuous thermal-overload conditions.

Current Limit

MIC5282 features output current-limit protection. The output sustains a continuous short circuit to GND without damage to the device, but thermal shutdown often results.

Input Capacitor

Connect a 1.0 μ F capacitor from VIN to GND. Micrel recommends the C5750X7R2E105M, 1.0 μ F, 250V capacitor made by TDK. When using a different capacitor, assure that the voltage rating of the capacitor exceeds any potential transient.

CPSRR Capacitor

Connect a 0.1 μ F capacitor from CPSRR to GND to maintain high power supply rejection. The voltage rating of the capacitor must be at least 14V.

Output Capacitor

Connect a 10 μ F capacitor from VOUT to GND. Assure that the voltage rating of the capacitor exceeds the designed output voltage of the MIC5282.

Output Voltage Setting

For the MIC5282YMME and MIC5282YMM, V_{OUT} is programmed from 1.27V to 5.5V using:

$$V_{OUT} = V_{REF} \times \left(\frac{R1}{R2} + 1 \right)$$

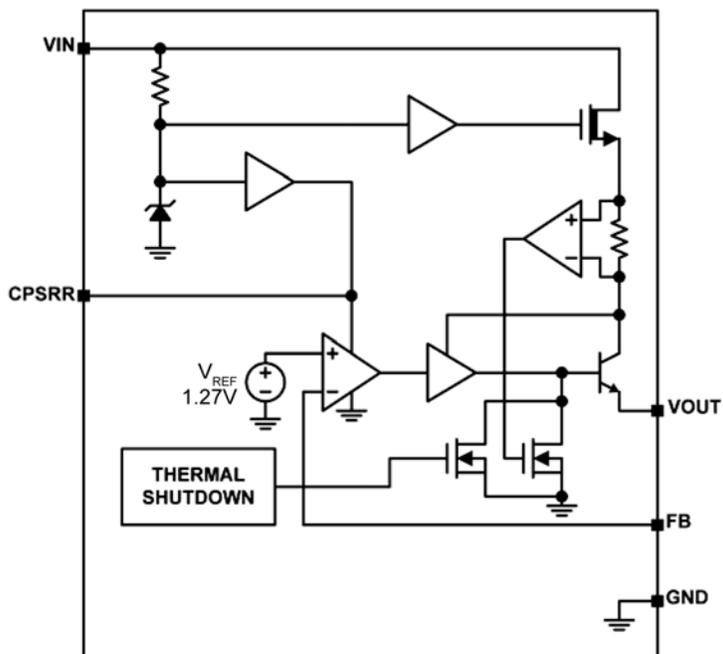

where $V_{REF} = 1.27V$, and R1 and R2 are shown in the Typical Applications circuit.

Thermal Measurements

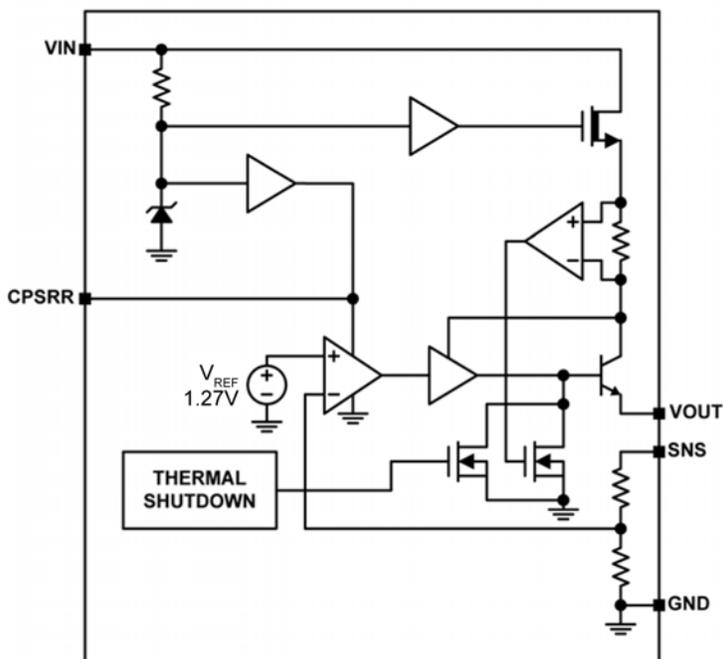

It is always wise to measure an IC's case temperature to make sure that it is within operating limits, but it is easy to get erroneous results. The standard thermal couple that comes with many voltage meters uses a large wire gauge that behaves like a heat-sink, resulting in artificially low case temperature measurements. Use a thermocouple of 36-gauge wire or smaller, such as the Omega (5SC-TT-K-36-36), to minimize the heat-sinking effect. Also, apply thermal compound to maximize heat transfer between the IC and the thermocouple.

An infrared thermometer is a recommended alternative. The IR thermometer from Optris has a 1mm spot size, ideal for monitoring small surface mount packages. Also, the optional stand makes it easy to keep the beam on the IC for long periods of time.
